

**Integrated  
Healthcare  
Accessibility  
and  
Monitoring  
Tool**

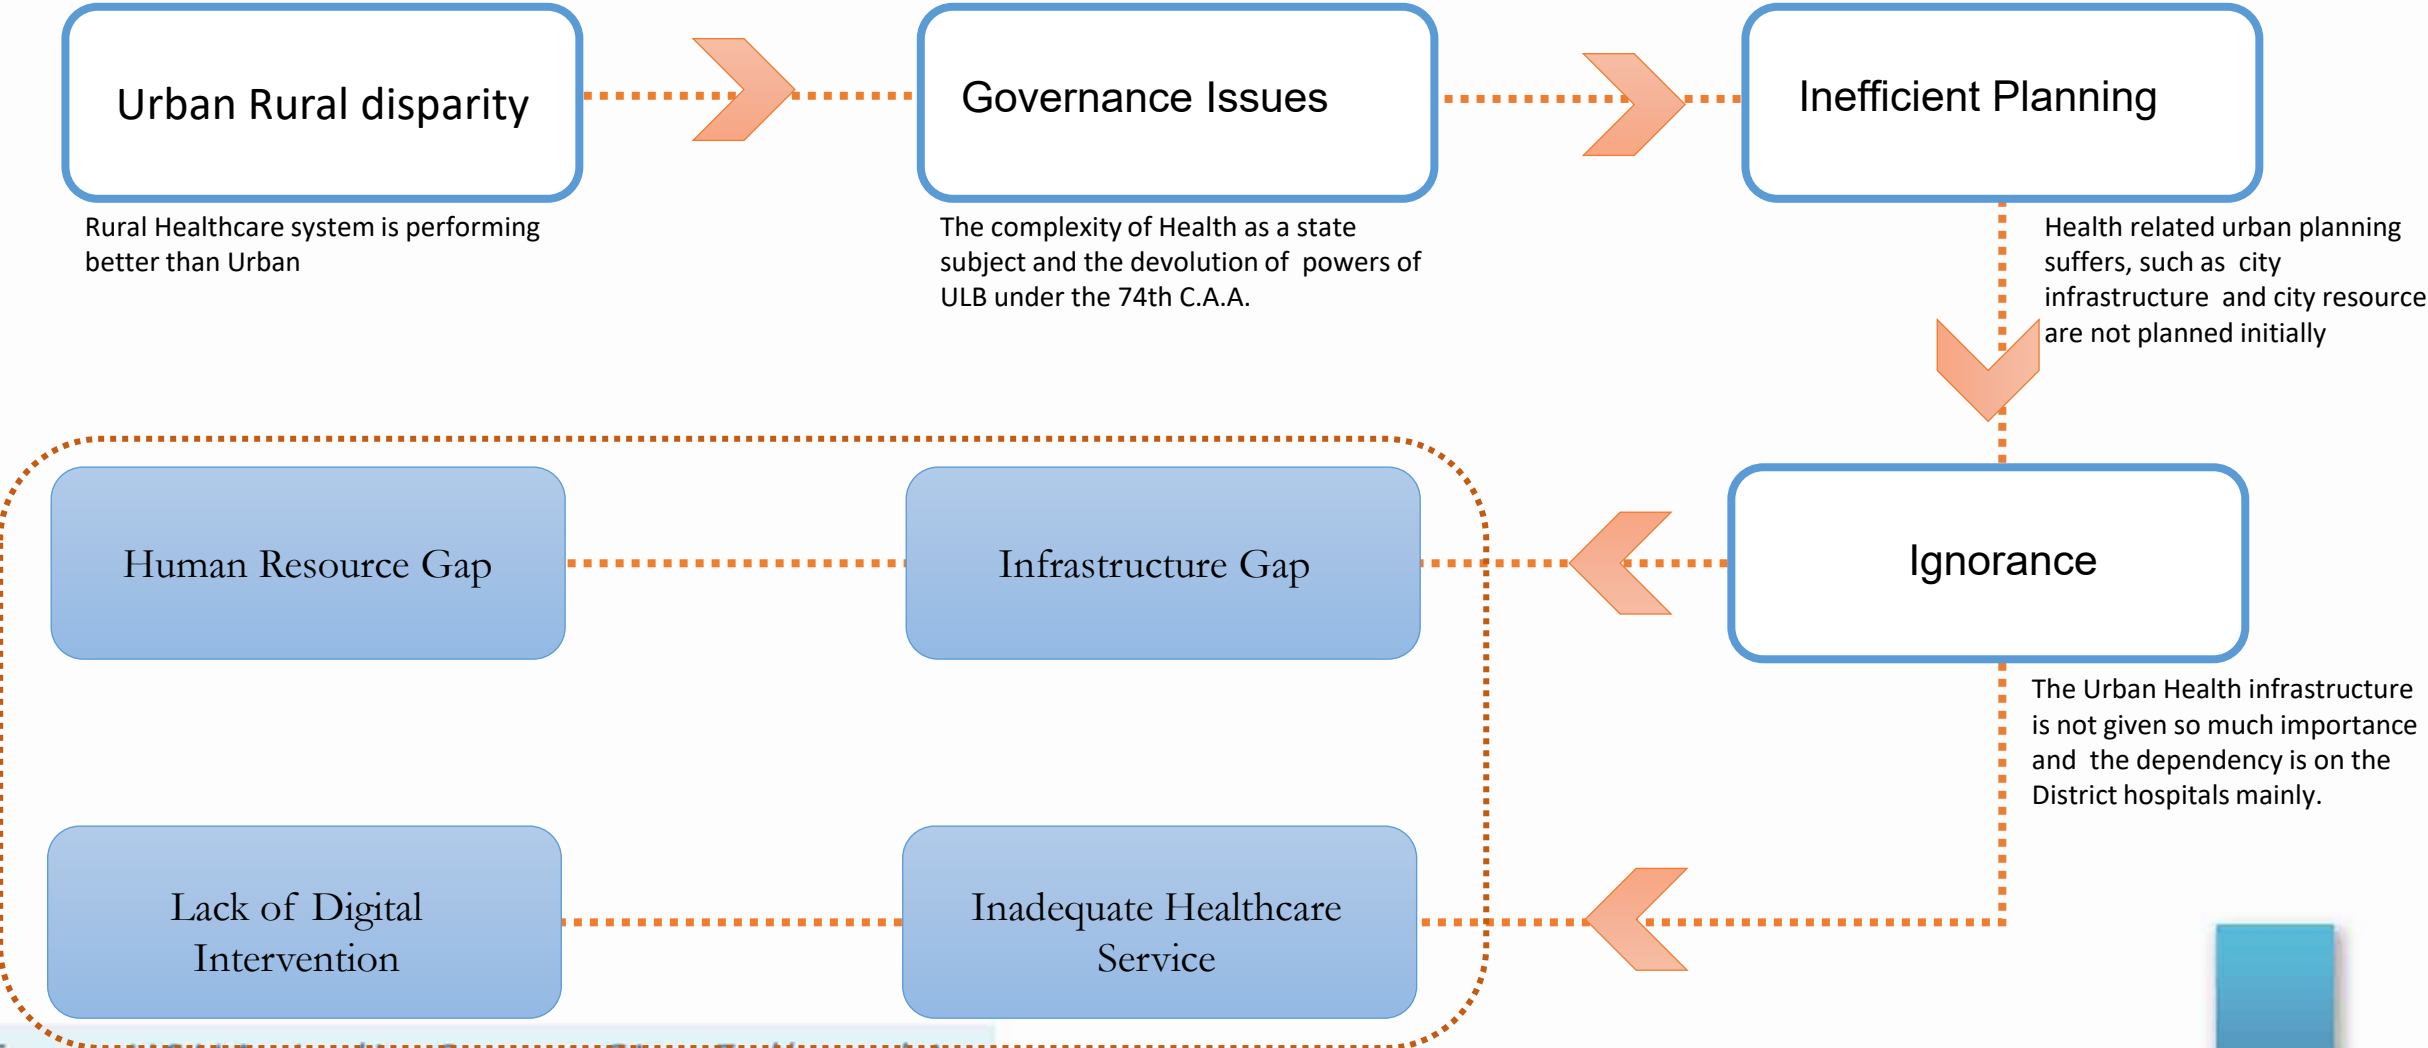

# Contents

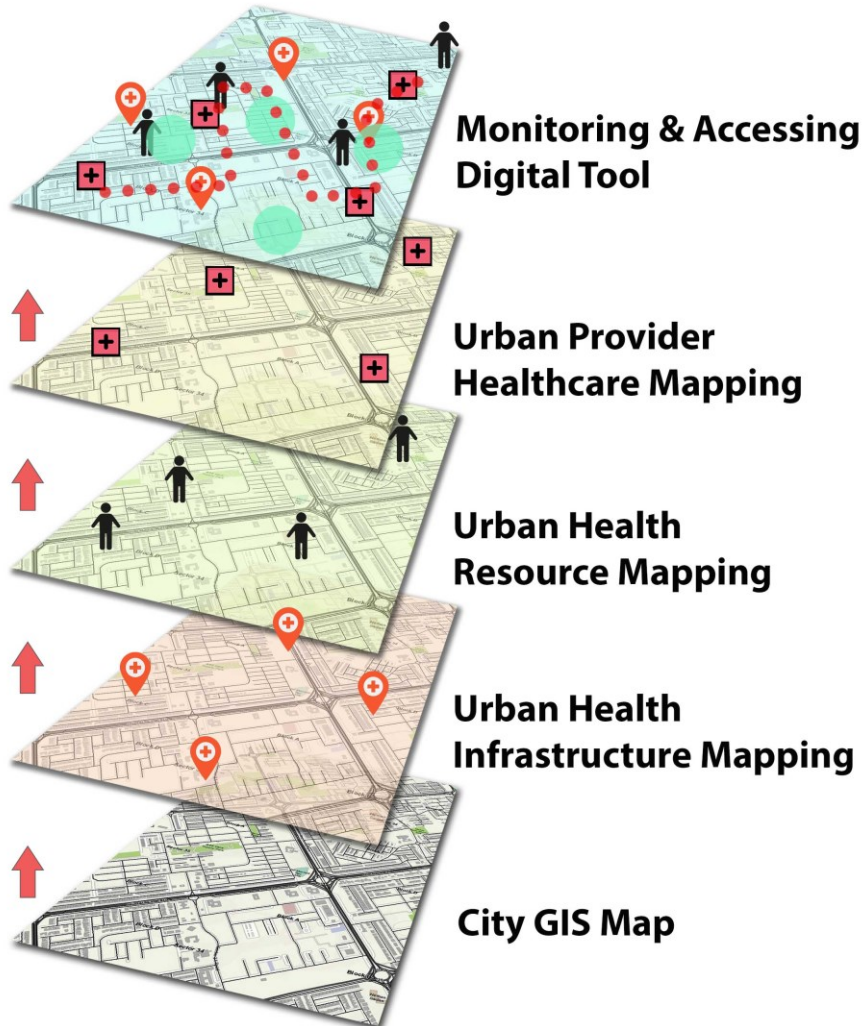

# Problem Statement

Lack of proper data and ineffective mapping of healthcare infrastructure and provider leading to less accessibility, unsystematic healthcare planning and Inadequate healthcare service

# Aim

To enhance healthcare accessibility for communities through integrating ULB, Service providers and citizens using data driven digital platform

## Approach for Developing Tool

## Stakeholders

Smart City SPV / ULB

Citizen & Community

Public Healthcare Providers & Workers

Private Healthcare Providers

# Objectives

---

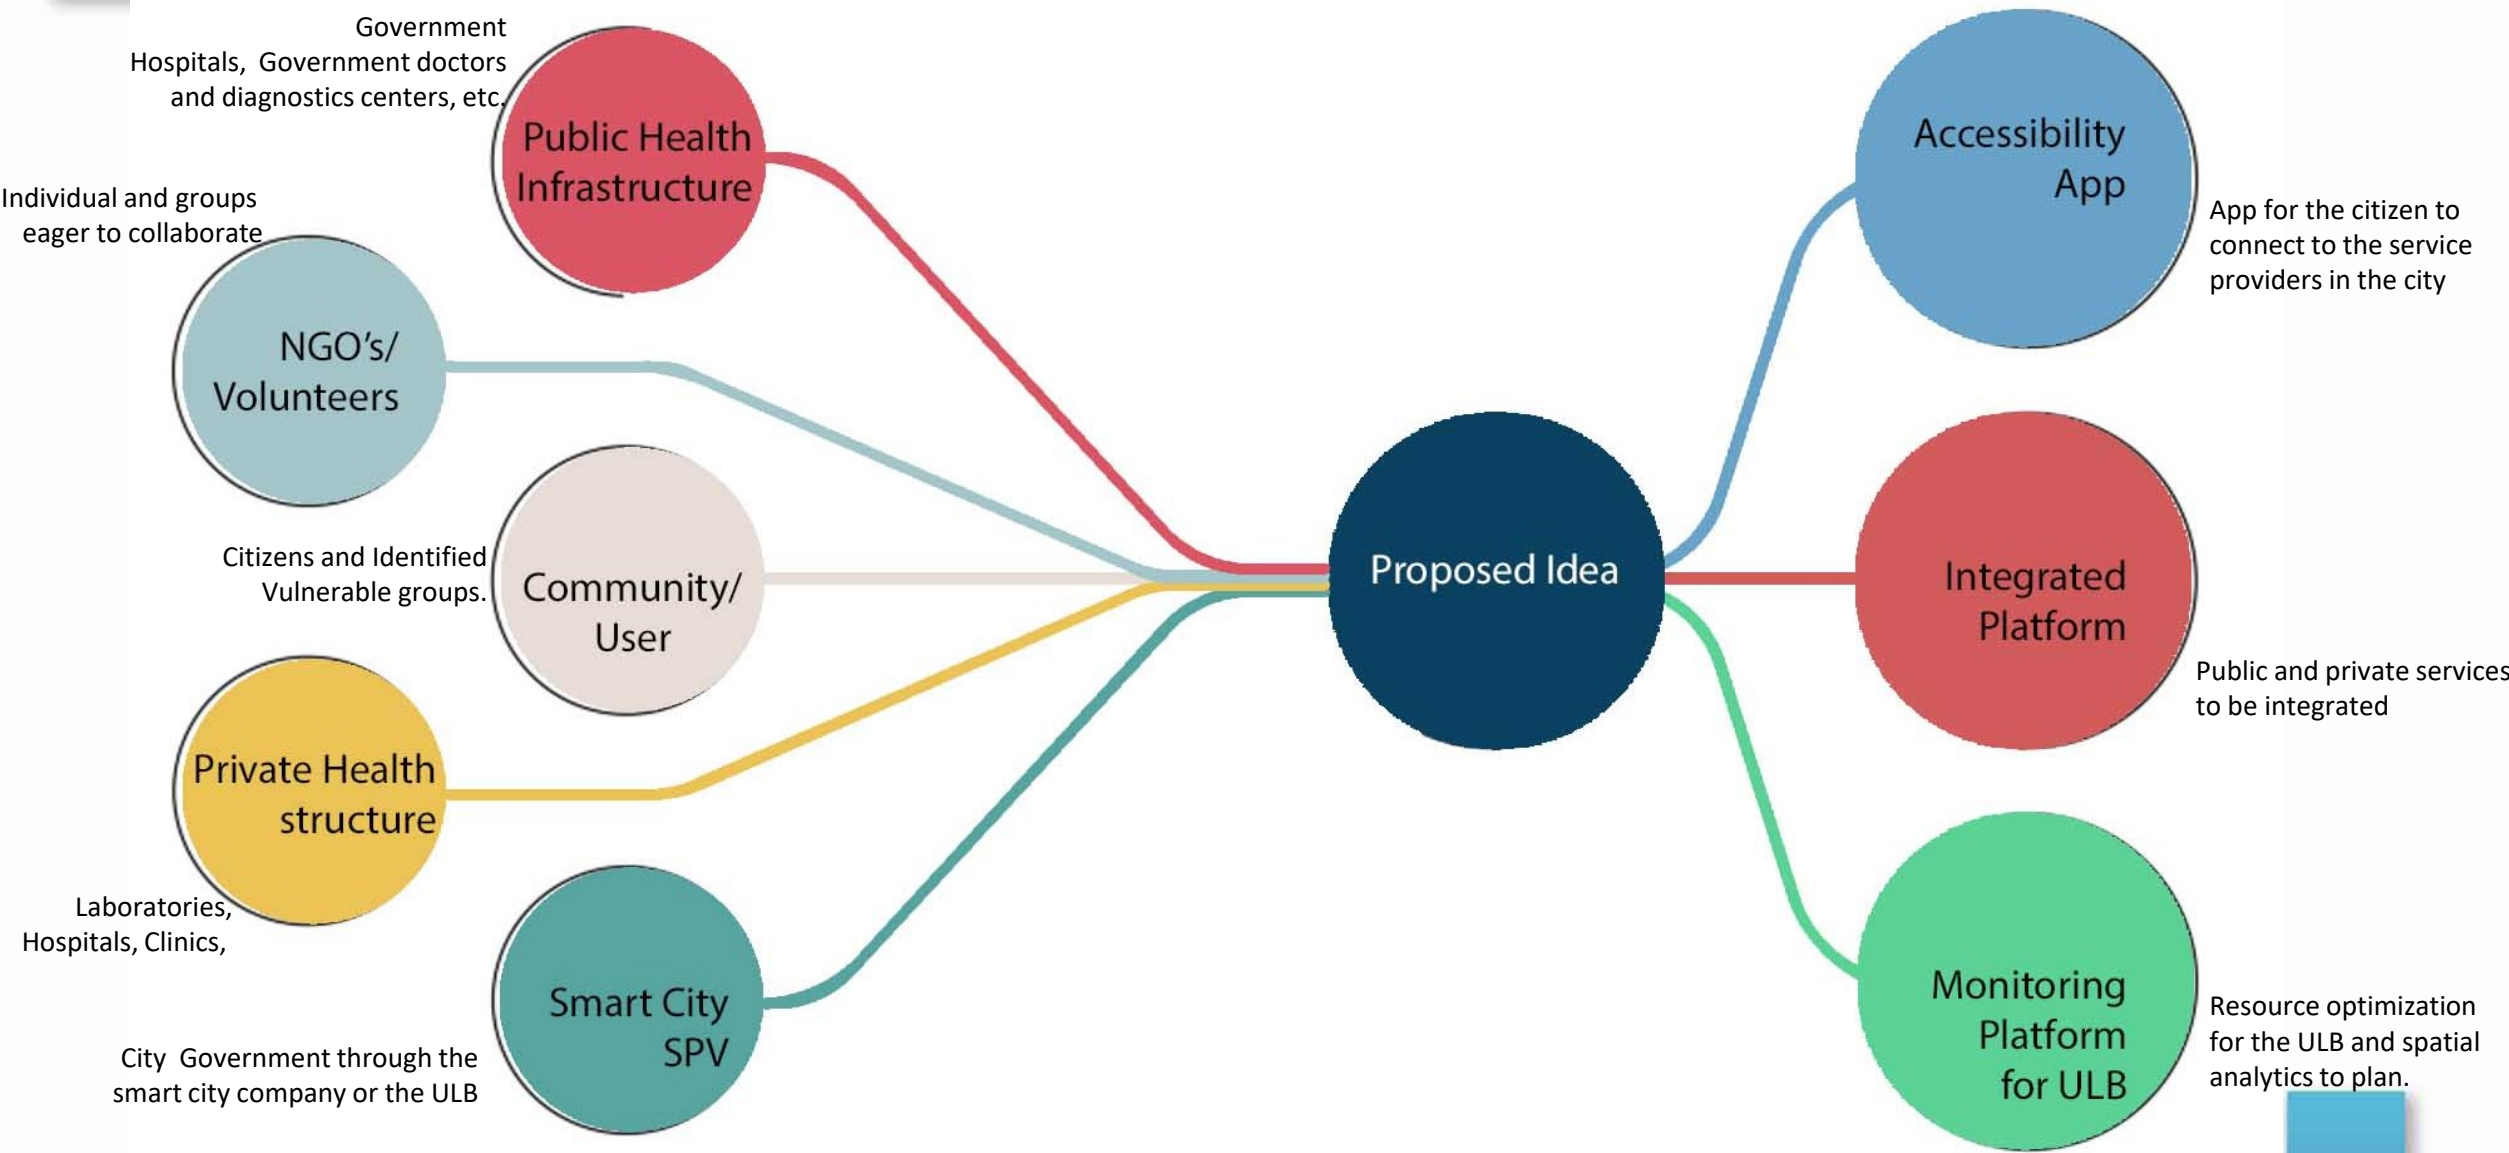

*To explore and investigate the existing healthcare system and accessibility in urban areas*

*To integrate data with city layer mapping (Health infrastructure (public & private), vulnerable communities, Healthcare Human Resource etc.) using GIS/ICCC*

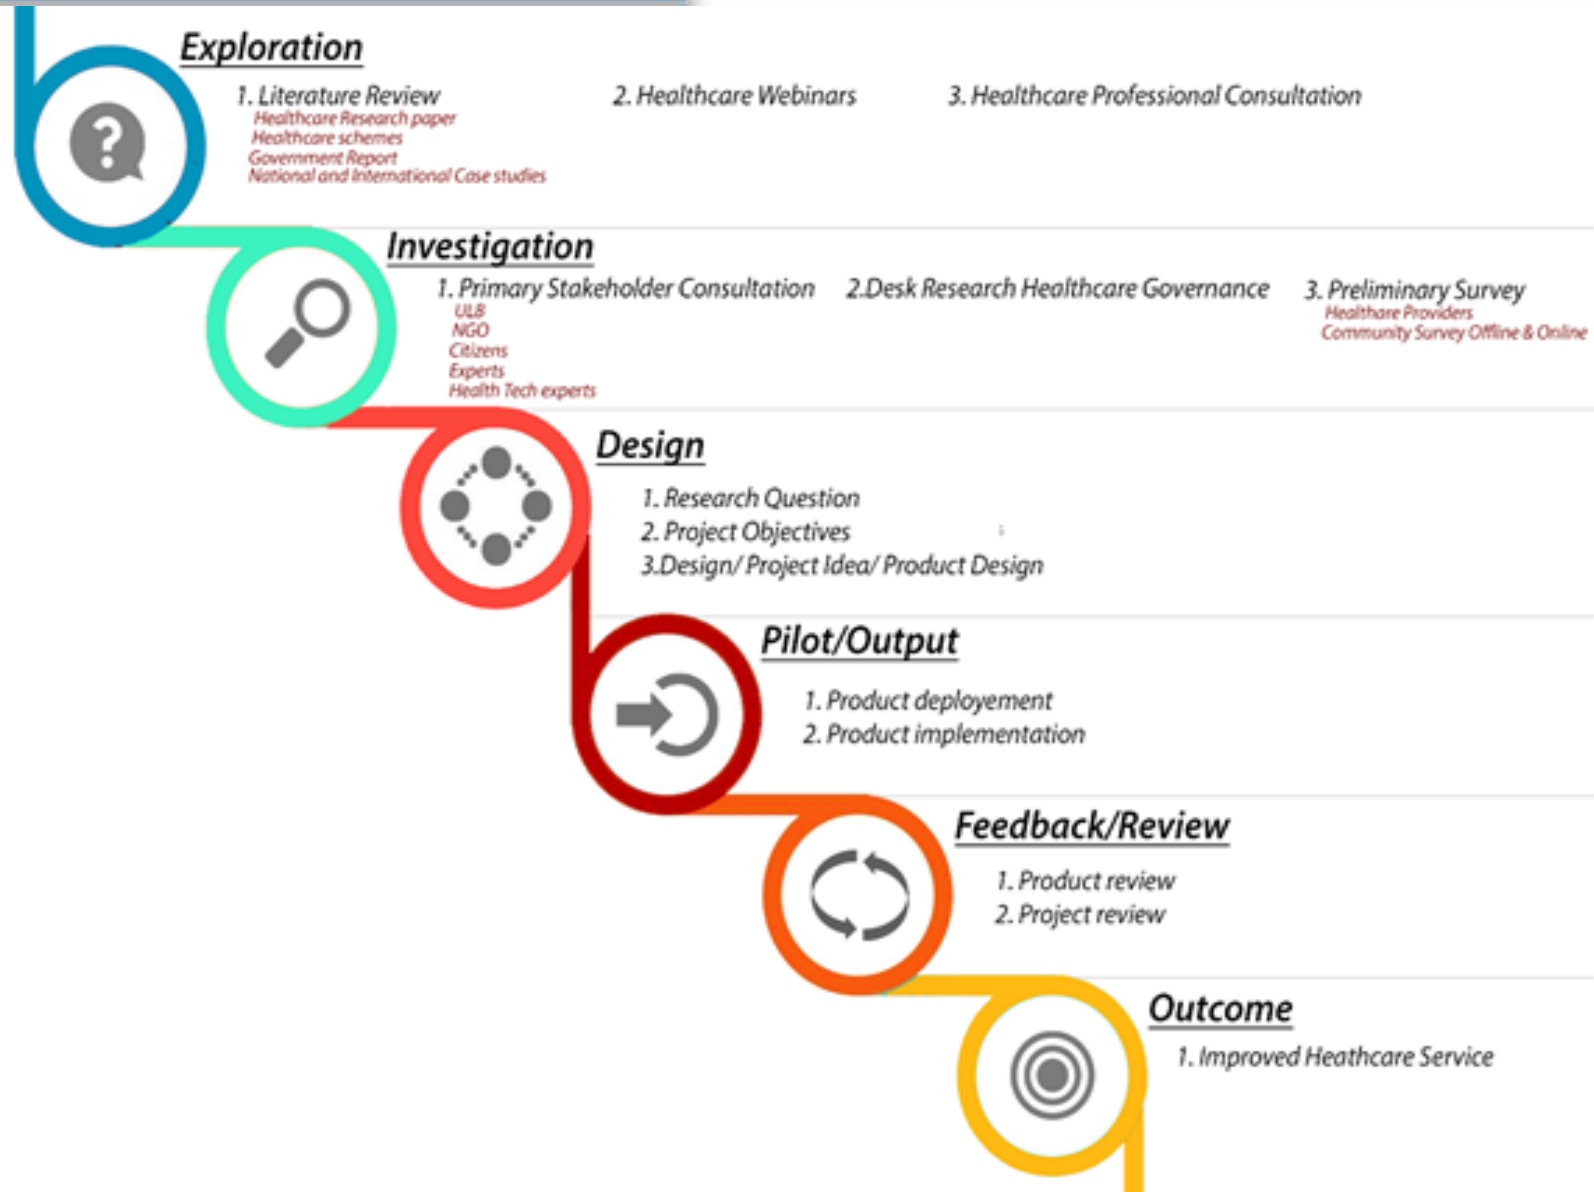

*To design & develop accessibility app for citizens and healthcare workers using technological intervention*

*To provide an integrated platform for SPV/ULB to monitor and systematically plan for healthcare services using AI and Machine learning*

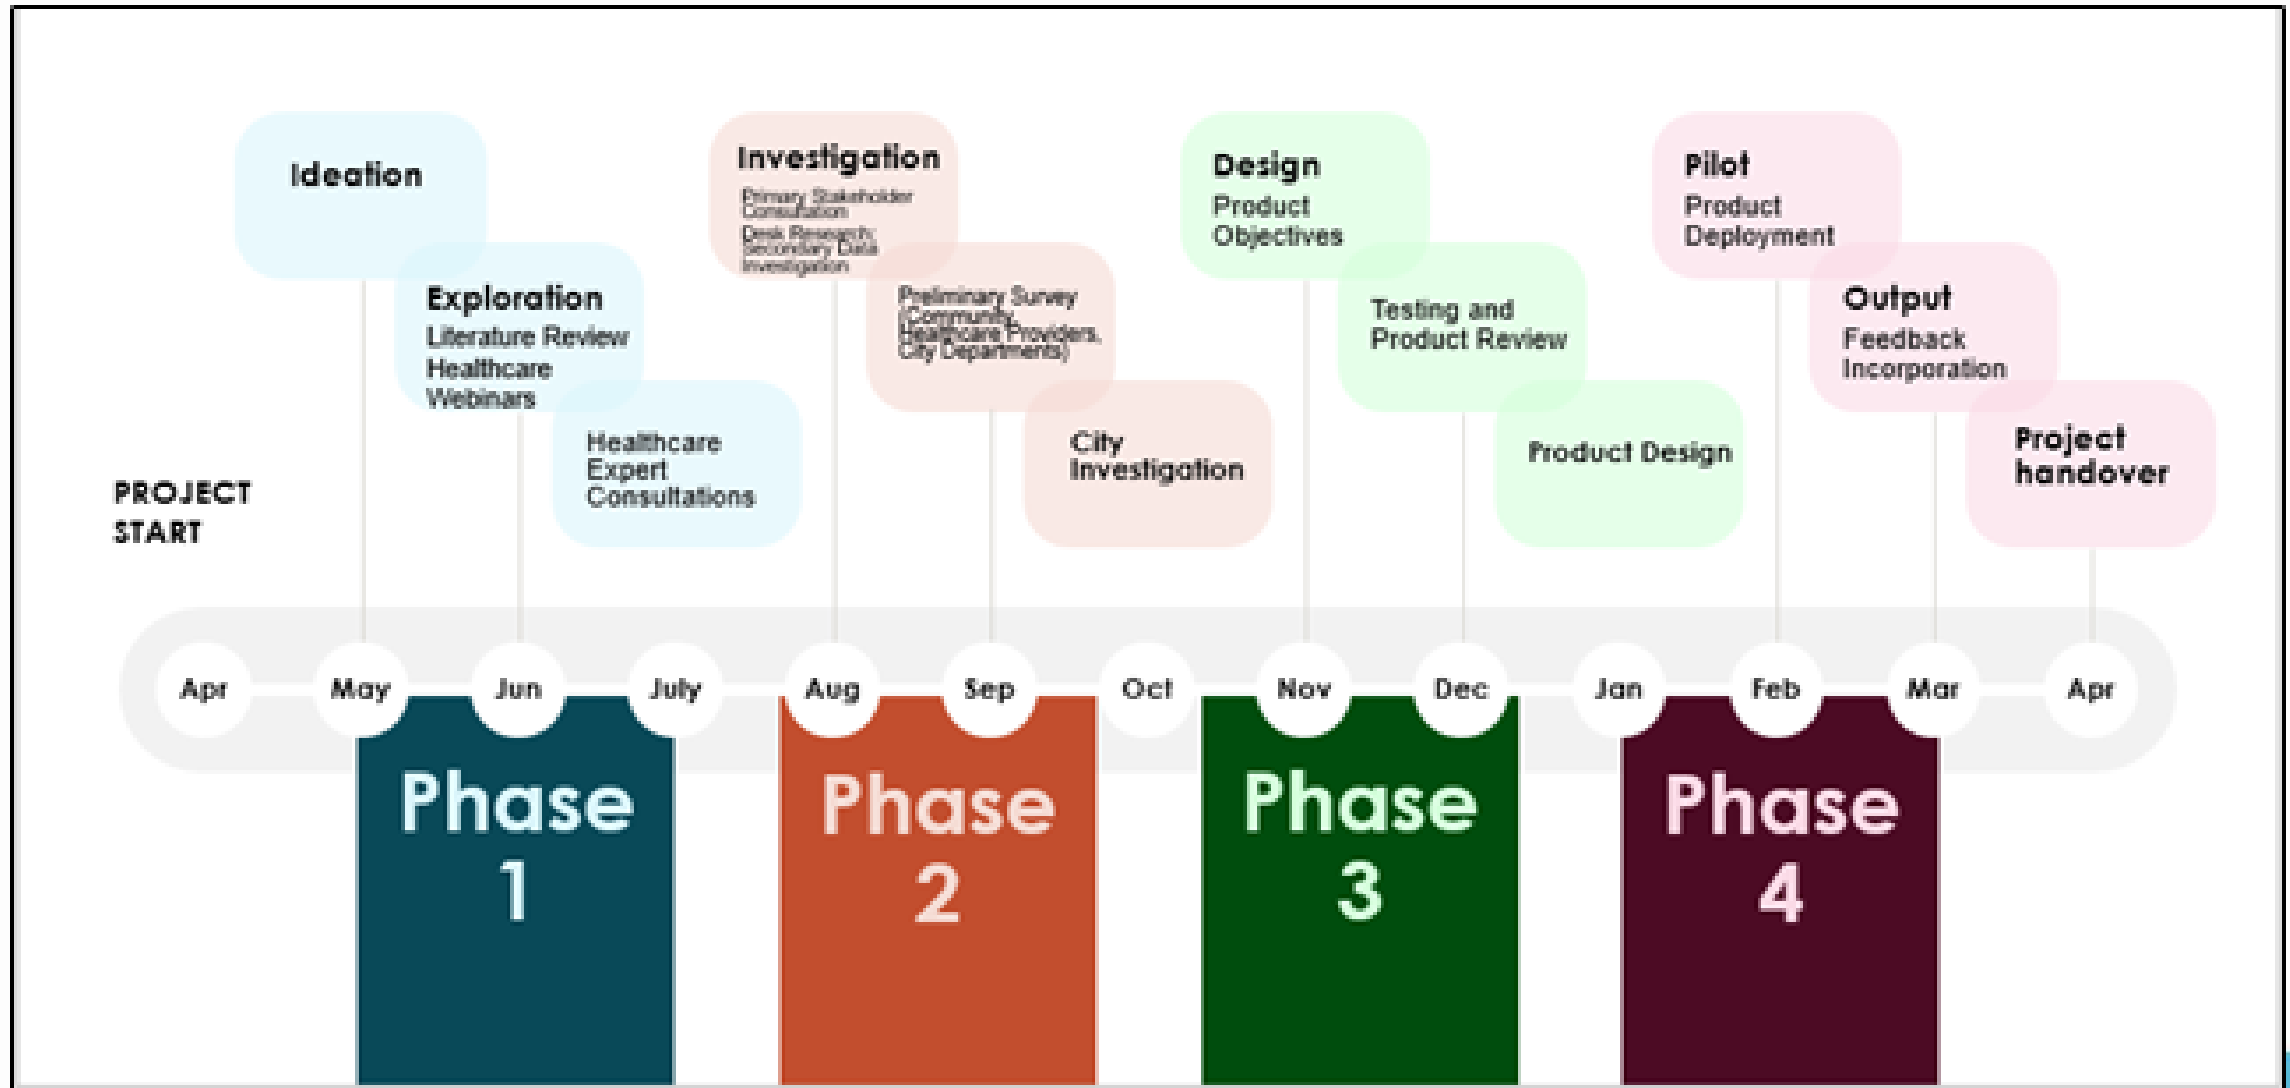

# Proposed Idea

# Methodology

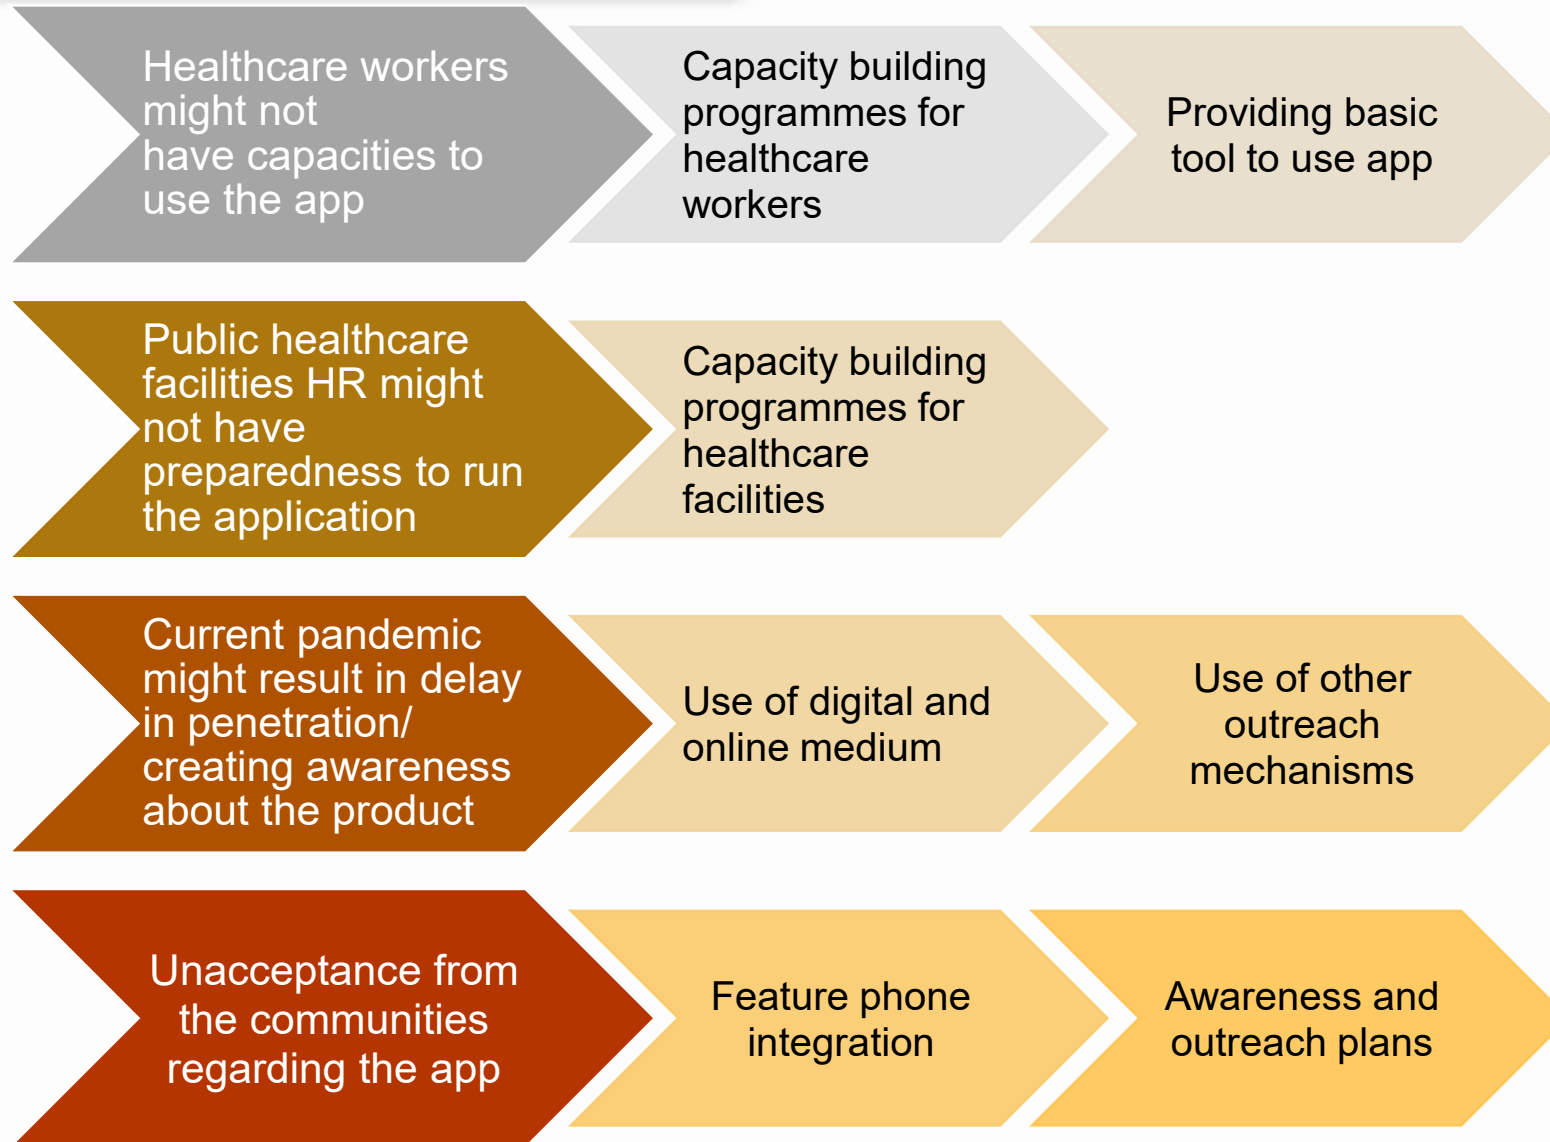

# Timeline

# Risks & Risk Mitigation

# Survey Analysis

106

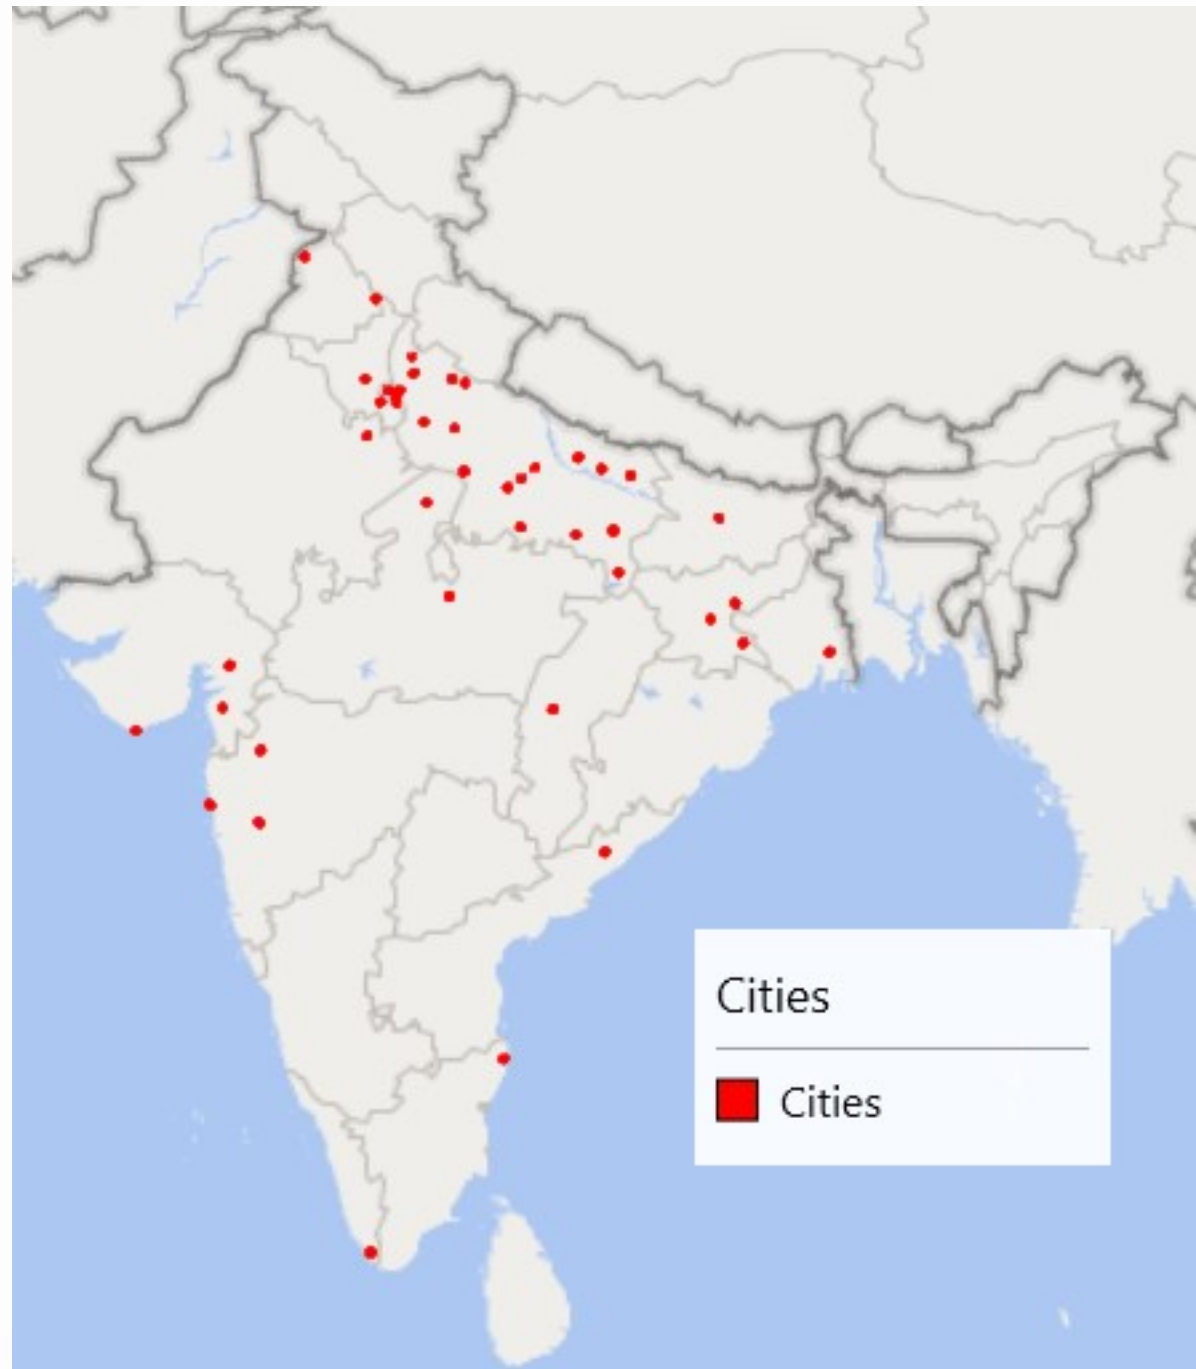

₹ 10,000

26-35 Years

Government Employee,  
Private employee,  
Self Employed

# Survey Analysis - Insights

Age Distribution - Citizen Survey Online

Gender Distribution - Citizen Survey Online

Distribution of Type of Hospital Visited - Citizen Survey Online

Preventive Measures by ULB wrt Disease and Time

Facility Satisfaction wrt Type of facility

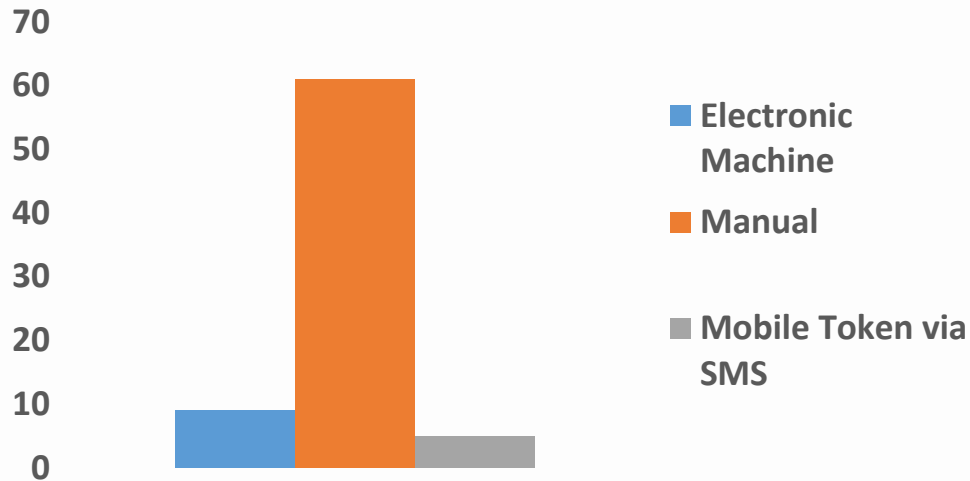

# Analysis Charts – 1\_Healthcard/Digital Readiness

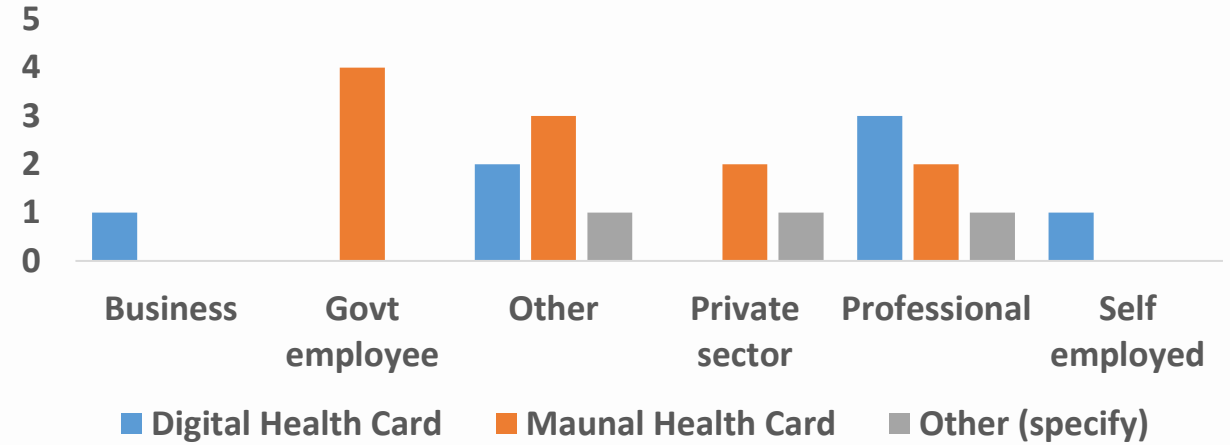

## Digital Intervention Readiness

## Type of Token Facility

## Availability of Healthcard wrt to Occupation

## Availability of Healthcard wrt to Type of Hospital

# Healthcard/Digital Readiness....

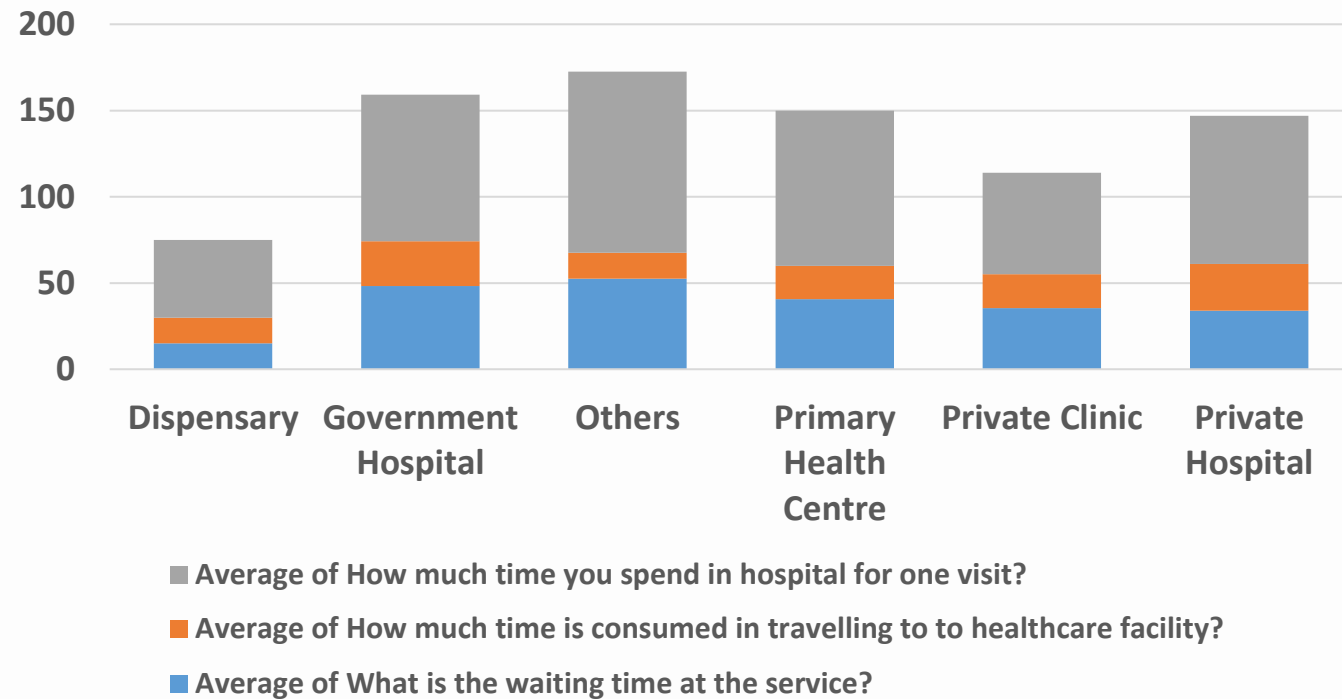

Pre Registration Facility wrt Type of Facility

Due to non-availability of digital intervention and long waiting hours, citizen find the public healthcare facility inaccessible and non-reliable

## 2\_ Time Consumption

Time Spend (mins) in a Health Facility

# Infrastructure & Finances....

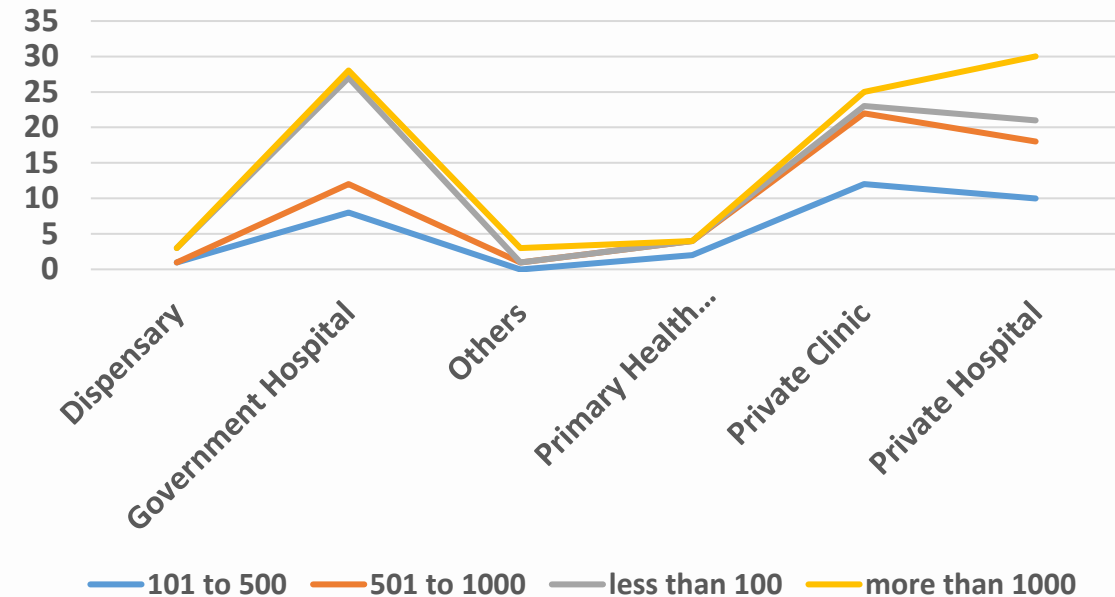

## Infrastructure Services wrt to Type of Facility

## Expenditure on Medicine/visit wrt Type of Facility

## Expenditure on Doctor/visit wrt Hospital

### Inference

More expenditure in private sector healthcare services on medicines and doctors due to much reliability, trust and majorly better and responsive service

Average Cumulative Expenditure per visit

- Average of How much you spend on medicine per visit?
- Average of How much do you spend on one visit to the doctor?

### Inferences

- Citizens spend more money in purchasing medicines in one visit to doctors which results in more share of expenditure in availing a service
- As per the survey it has been predominant that majority of citizens purchase medicines from the nearest private chemists

# Preferences....

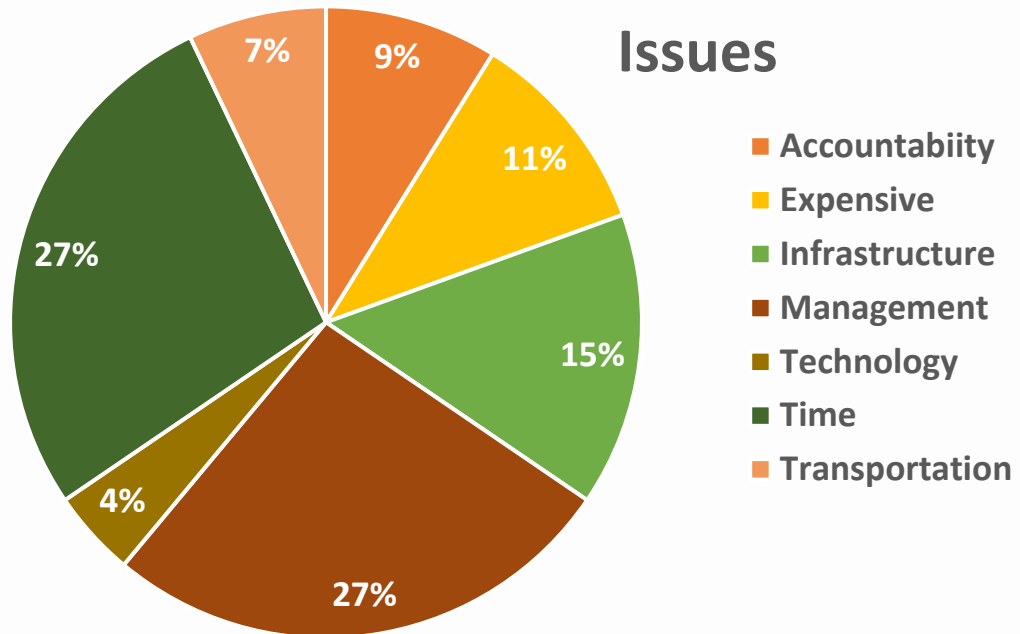

## Type Of Hospital Visited Vs Preferred

## Reason for Preference

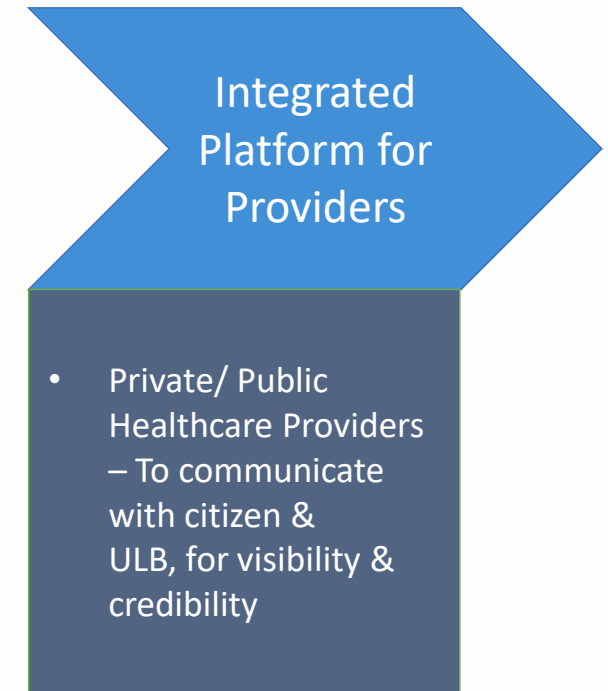

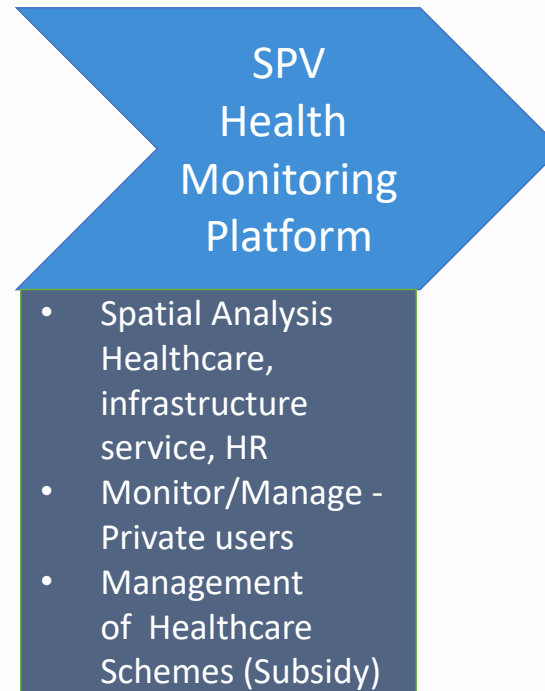

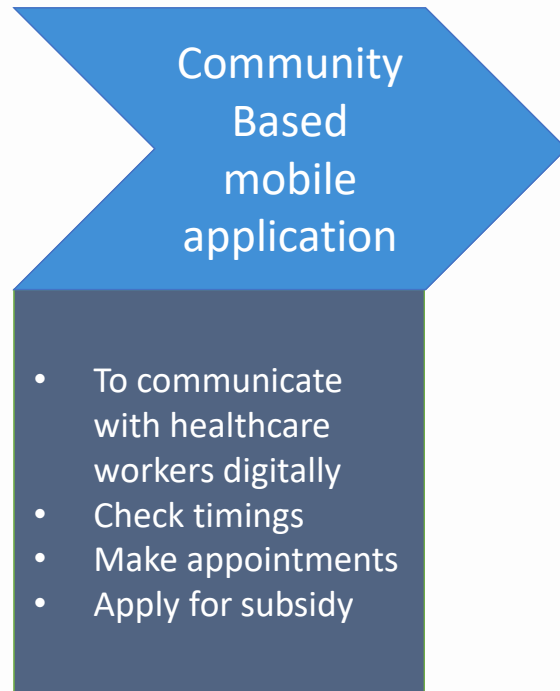

# Issue and Suggestions

# Output & Outcomes

## Output

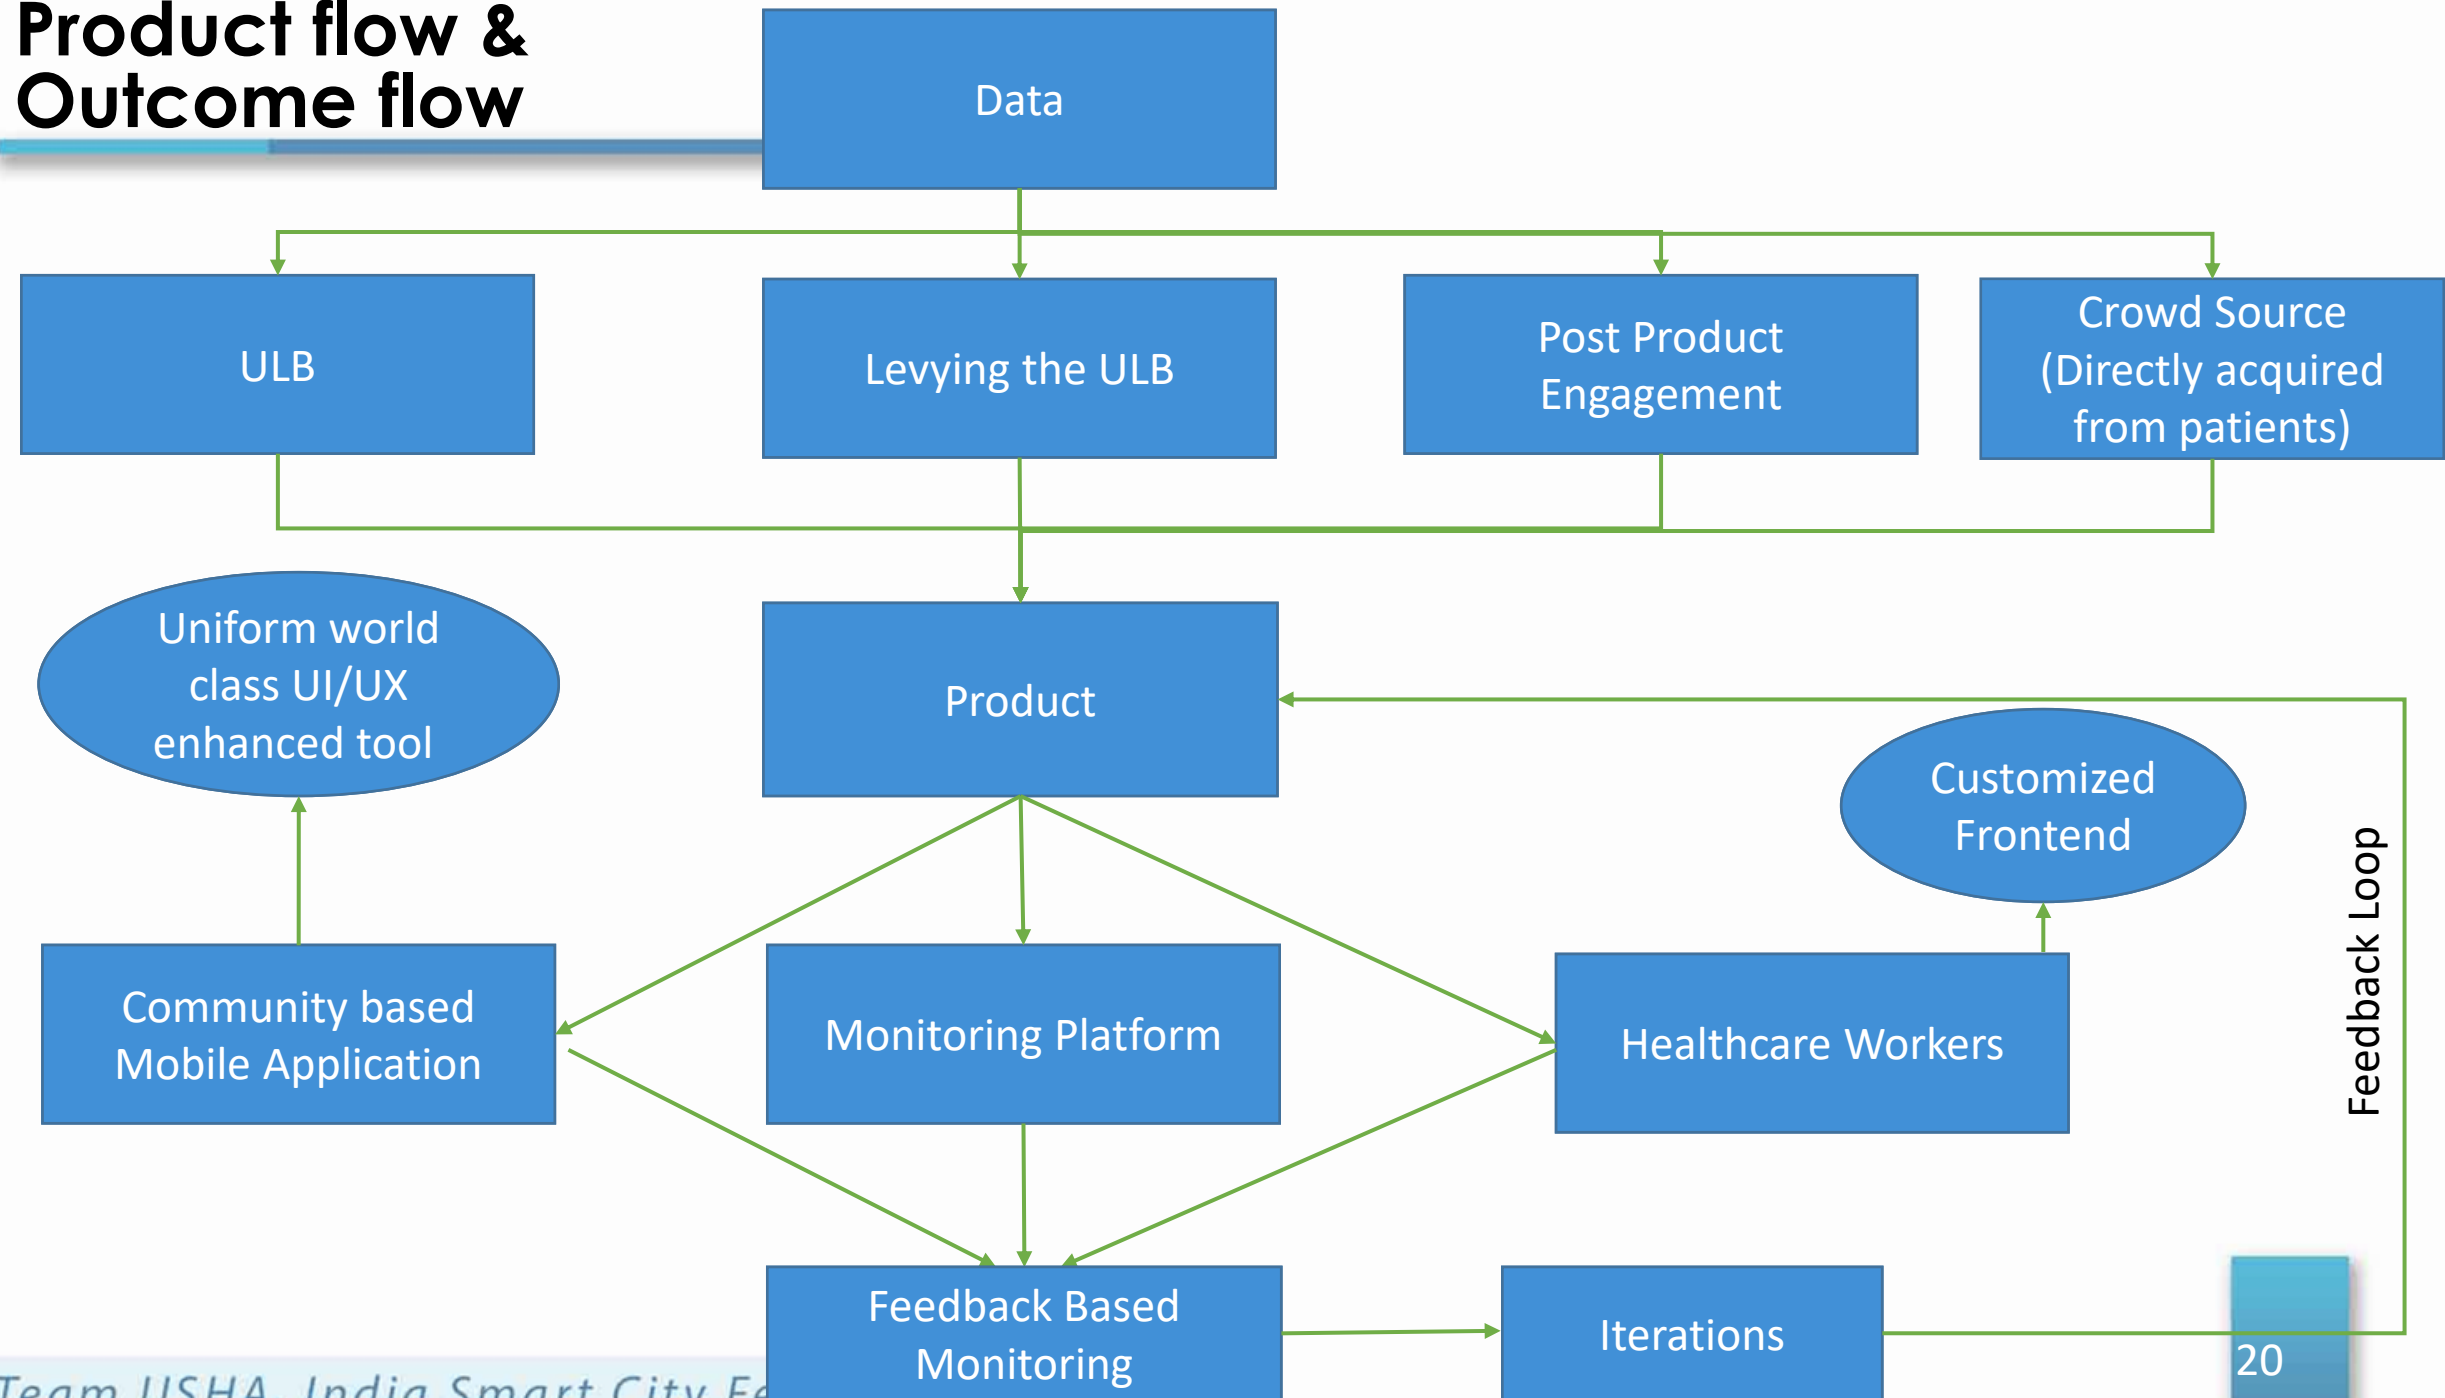

---

## Outcomes

# Product flow & Outcome flow

# Key Performance Index

Stakeholders/Beneficiaries	Type of Users	KPI	Data Points
<b>Public</b>	Citizen/public- all groups of population	Total time, Cost Incurred, Distance, Satisfaction, Disease	Age& Gender, Occupation, Location, Type of Disease, Type of facility availed, Travel time & mode, wait time, Consultation cost, Diagnostic cost, Medicine cost
<b>Healthcare Provider</b>	<ul style="list-style-type: none"> <li>• Public Provider</li> <li>• Urban ASHA, ANM, Community Volunteer,</li> <li>• Private Provider</li> <li>• Clinics,</li> <li>• Diagnosis centers/Lab-Pharma</li> </ul>	Human Resource, Infrastructure, Patient Record, Time	Type of facility, Footfall, Specialities, Staff strength, Location,
<b>SPV</b>		Demography, Socio-economic profile, City Health Infrastructure, City Health HR, Diseases, Time, City Spatial Data	City Infra Layers, Disease records, type of Health resource, Administrative boundaries, Social Classification

# Social Benefits & Outreach

---

## Social Benefits

- Enhanced Accessibility
- Shifting and managing crowd at public healthcare facilities
- Implementing Social Distancing norm
- Benefactress will get pre-informed decision making
- Increased time for the beneficiaries
- Monetization of the social benefits at later stages

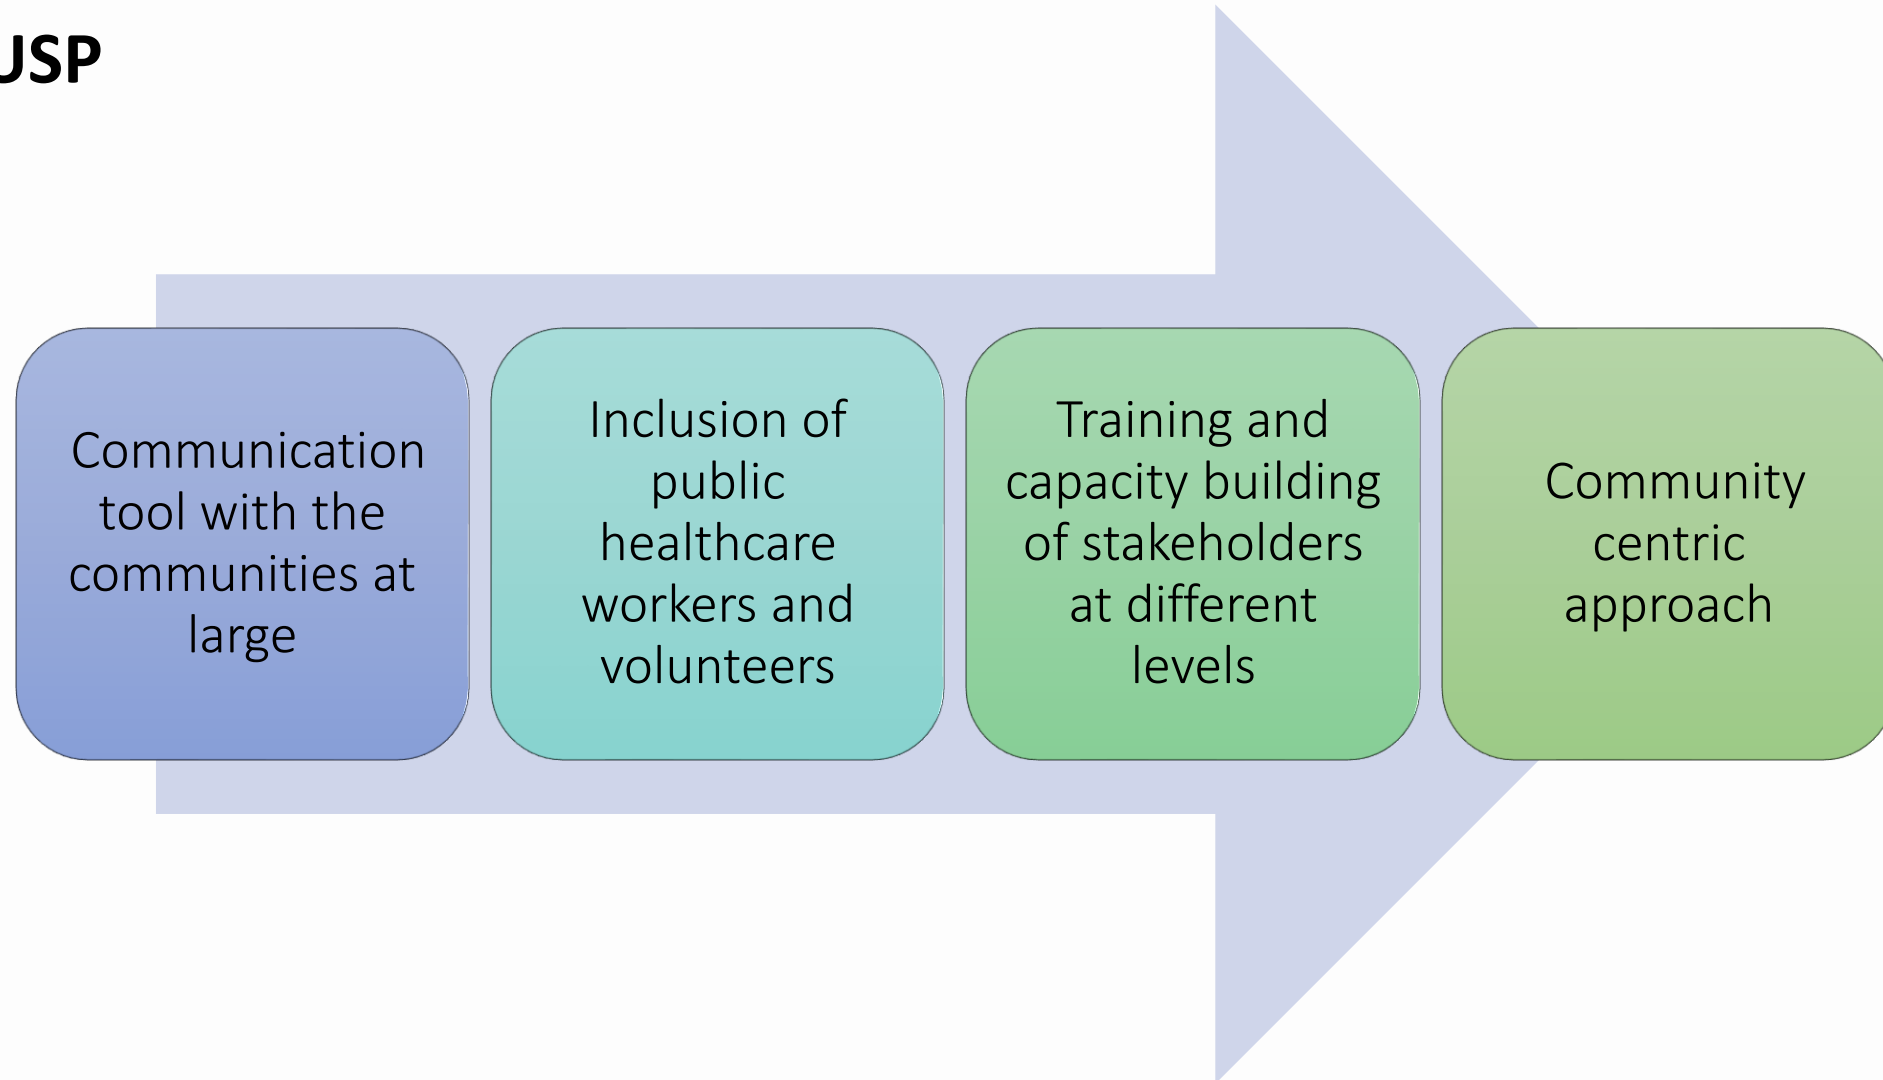

## Outreach Strategy

- Social Media outreach
- City Website
- Camps and Kiosks for awareness
- Training and Capacity Building programs
- Partnerships

# USP

---

## Product USP

# Advantages

---

Predictive Modelling and Analytics for different diseases

Systematic Healthcare Planning at ULB

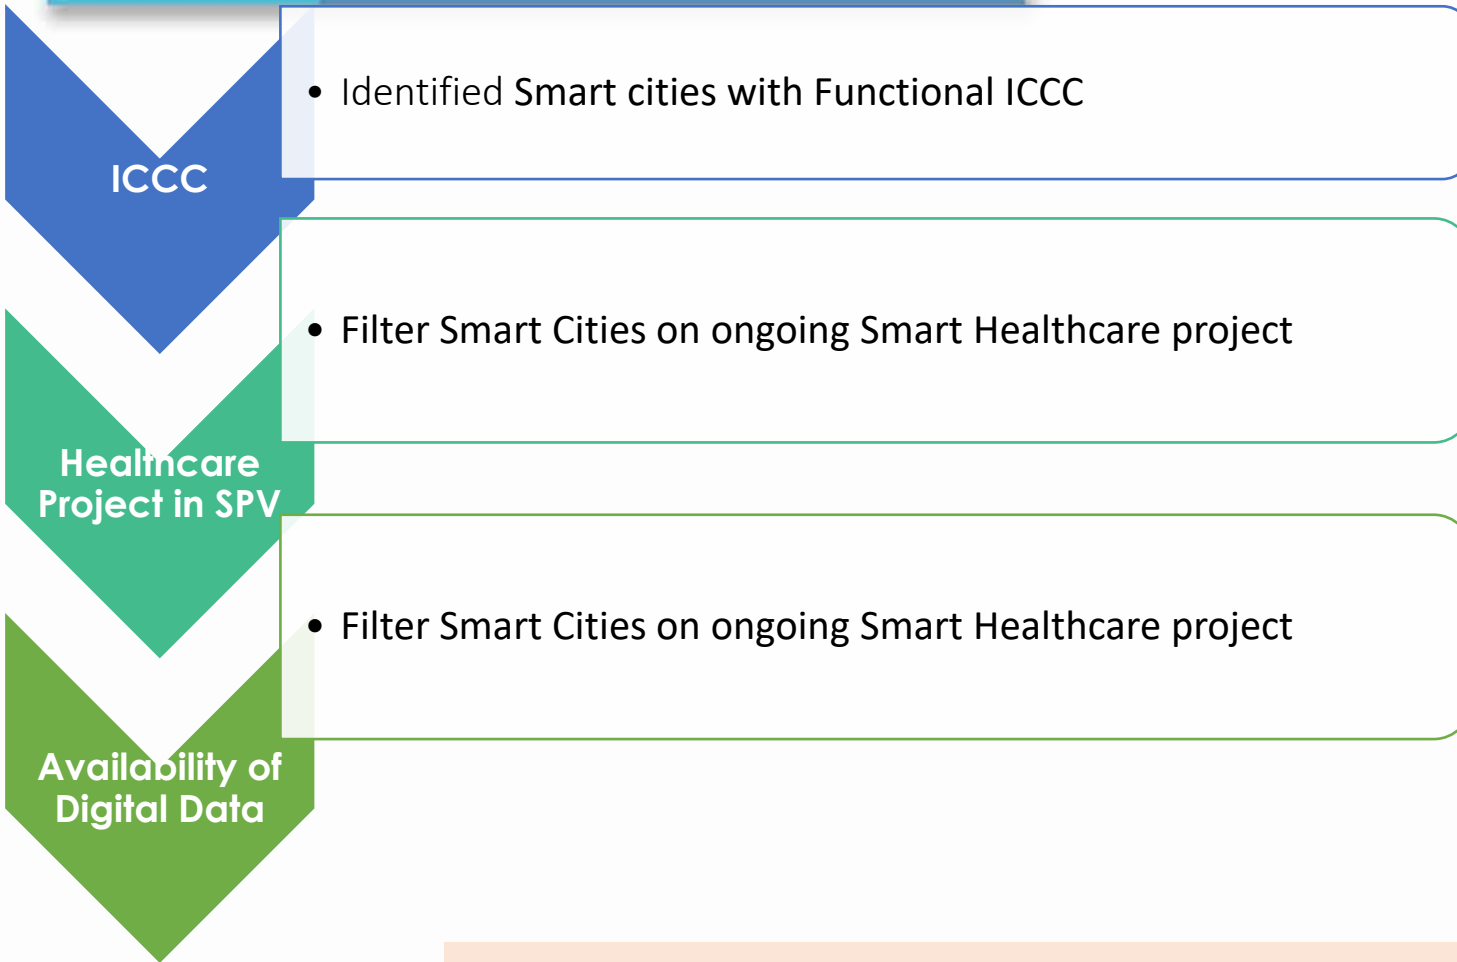

Betterment of Value Chain

Opportunities for future innovations and intervention in healthcare sector

Reduction in physical burden on urban healthcare systems

# Prospective Cities

**Possible Area of Intervention**

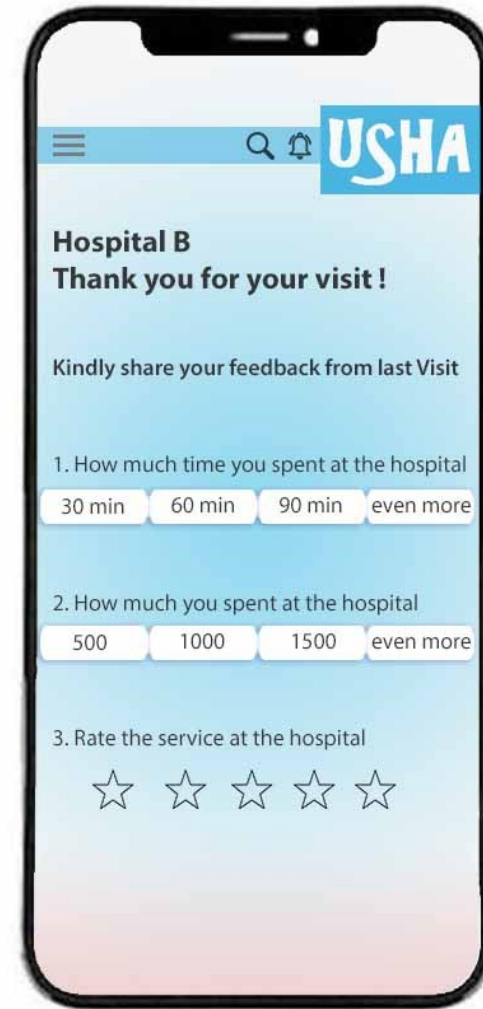

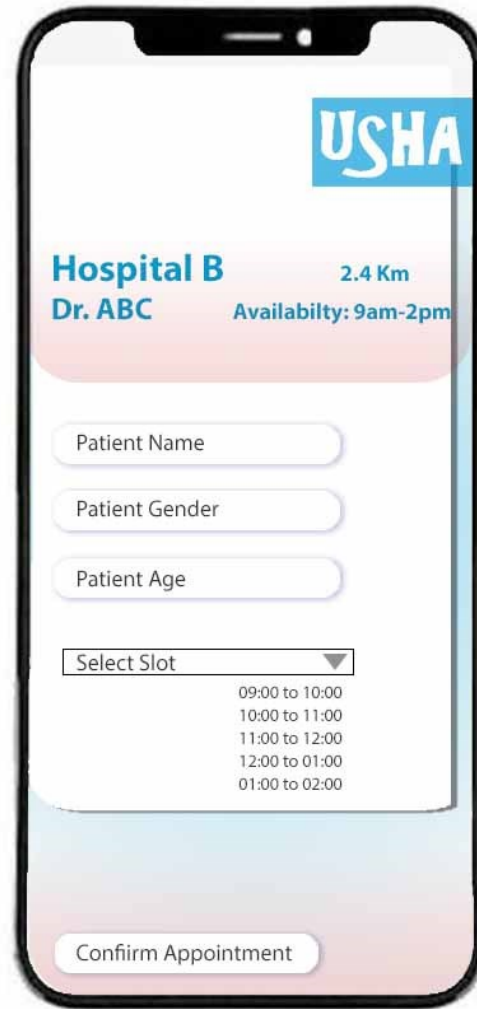

Pilot will be carried within city boundary, around 2 to 3 wards.  
OR  
Pilot will involve around 2 to 3 U-PHCs and one or two Hospitals.

- Agra**
- Chandigarh**
- Indore**
- Shimla**
- Ahmedabad**
- Namchi**
- Varanasi**
- Lucknow**

# Challenges and Limitation

---

Unavailability of service providers due to current COVID situation for surveys

Consumer Surveys are broadly captured from different cities using online surveys

Unavailability of health sector data at City level

Lack of response from the stakeholders online as well as offline

Due to pandemic situations, on ground surveys could not be completed

Low Technology peresistence in public Healthcare system

# Assumptions

---

Community will use the app

The problem identified is true to cities

The city has necessary basic digital penetration to implement the project

The city has some role and responsibility to address the issue of healthcare services
