

Energy Management

Organization : India Smart Grid Forum

Smart city concept :

- A city that uses smart computing technologies to make the critical infrastructure components and services which include city administration, education, healthcare, public safety, real estate, transportation and utilities – more intelligent, interconnected and efficient.
- ISGF is a PPP initiative of ministry of power, GOI for accelerated development of smart grid technologies in the Indian power sector.

Support to programme:

- Formulation of roadmap for smart cities in India.
- Shortlist cities that can be made smarter at marginal costs develop a smart city maturity model with clearly measurable parameters to define conduct “as-is” survey of shortlisted candidate cities using smart cities maturity model build business cases for smart cities projects in cities where T&D losses are over 25%.
