

Information and Communication Technology

Organisation: NASSCOM

Smart City Concept:

- A smart city is the current mega trend where an Indian city's sectorial service delivery leverages technology to enrich its resident's standards of living, provides positive investment climate for business, and equips governments to maximize resource utilization and provide transparency.

Support to Programme:

- ICT based platform: as an enabler of delivery of services such as water supply, traffic management, waste management etc.
- GIS: for smart cities (ESRI) – urban planning, utilities, mobility, energy, public works, citizen engagement
