

Energy Management

Organization : New Energy and Industrial Technology Development Organization (NEDO)

Area of expertise:

- Development of new energy and energy conservation technologies, verification of technical results and introduction and dissemination of new technologies.
- NEDO promotes greater utilization of new energy and improved energy conservation.
- Contributes to stable energy supply and resolution of global environmental problems by promoting the demonstration of new energy, energy conservation and environmental technologies.

Support to programme:

- NEDO undertakes development of new energy (photovoltaic, wind power etc.) And energy conservation technologies.
- NEDO pursues research and development of advanced new technology. Drawing on its considerable management know-how,
- NEDO carries out projects to explore future technology seeds as well as mid –to –long –term projects that form the basis of industrial development.
- NEDO supports research related to practical application
