

Urban Mobility

Organisation: SIEMENS

Smart City Concept:

- Continuous balance between three fundamental elements quality of life, environmental protection and economic competitiveness will enable cities to address the challenges they face.
- Cities which reach this equilibrium will be fit to address the challenges they face and can look forward to a more sustainable future.

Support to Programme:

- SIEMENS has formulated a city performance tool (CyPT) which has been applied in six cities (Vienna, Munich, London, Nanjing, New Bedford, Riverside)
- Siemens infrastructure projects
 - i. Mobility, Traffic management
 - ii. Energy management
 - iii. Smart grids & network planning
 - iv. Building technologies
 - v. Security
 - vi. Water and waste process automation
