

CLOUD SOFTWARE PLATFORMS

A suite of pre-integrated or standalone software platforms designed for public municipalities & private companies who operate in waste logistics & recycling materials, new energy plants & supply loops driving efficiency & accuracy; delivering profitability, flexibility and usability.

Choose from the suite of mobile & web apps or design your own to increase interaction, enhance work flow, usability, engagement & information to any stakeholder on any device & any operating system.

Preconfigured waste operations & recycling materials business processes to manage, supply loops, logistics, export, subcontractors, weighbridges, production, inventory, pricing, purchasing & sales.

Preintegrated business management software for automated payments, charging, invoicing, accounting, banking & key business management information.

Cost effective pay as you go cloud infrastructure deployment to manage complete server, backups, disaster recovery, mirror & implementation environments.

Proven integrated software platforms to manage mobile device applications, customer & supplier web portal & online collaboration.

Waste, resource & commodities trade, export & global logistics. Recycling, reprocessing & refurbishing materials, batch & asset traceability.

Automated, preintegrated, sales & purchase order processing, invoicing, accounting, finance & banking transactions.

Hosted SaaS cloud environment – cost effective, flexible, scalable, automated backup, mirror & disaster recovery.

User Experience

- Choose from the preconfigured suite of mobile & web applications & connect all stakeholders
- Develop your own new workflows & interactive process for disruption & experience
- Collaborate with business partners for efficient billing, payments & reporting
- Integrate social & gamification functions for unique & optimal experience

Internet of Things

- Connect to machines, devices & objects to retrieve valuable data for disruptive process use
- Utilise data to provide information & analytics on use of devices to speed admin & reduce cost
- Design & build disruptive process to enhance experience & deliver competitive advantage
- Link to back office process to increase efficiency & service and reduce cost

Mobile & Web Applications

- Utilise the existing mobile & web apps pre-integrated to operations & accounts
- Design interface & experience for engagement, speed, disruption & optimal performance
- Available on any device & operating system to allow for easy interaction with key stakeholders
- Low Code & Rapid Application Development (RAD) cuts innovation cost

Waste Logistics

- Plan, schedule & automate outbound job instructions & inbound materials forecasts
- Manage scheduling & plan capacities for external subcontractors & in-house assets
- Administer comprehensive pricing matrices for all activities for accurate cost & profit
- Track, export & monitor materials & asset movements with RFID, Sensor & GPS

Recycling Materials

- Manage forecasting & capacity for recycling, refurbishing & reprocessing activities
- Integrated weighbridge confirms inbound materials supply for recycling planning
- Inventory & recycling process manages & monitors value added, production & disposal
- Comprehensive materials management automates statutory reporting

Total Customer & Supplier Management

- Manage comprehensive customer charging & supplier payments automatically
- Confirm payments & charging with transparent line level job profitability reporting
- Enquiry, quote, pipeline, contract, forecasting & customer service management
- Comprehensive subcontractor job instructions and pricing management for total accuracy

Financial & Management Information

- Preconfigured & localised Chart of Accounts allow for automated posting from work instructions
- Accounting determination rules post automatically to predetermined codes for accuracy
- Integrated sales & purchasing ordering for customer & supplier revenue management
- Full banking & budgetary management give project, cost & management accounting insight

Data Management, Information, Reporting, Analytics & Intelligence

- Utilise data governance & control in-process to automate standard reports to stakeholders
- Extract any data for publishing in any format through mobile, operations & accounting process
- Build comprehensive information environments with reporting tools included in software
- Transfer low value data administration to the high value use of information for further efficiency

Cloud Platform

- Fully configurable cloud server environments for optimum use & cost efficiency
- Combine CPU, memory, storage, networking capacity flexibility for individual application
- Deliver automated backups and disaster recovery for secure, easy & instant retrieval
- Halves infrastructure cost while providing a scalable platform for multiple technical applications

Project Implementation & Support

- Committed, dedicated & certified global teams to implement, build & train
- Hybrid project methodologies to deliver implementations on time & budget (Agile/PRINCE2)
- Client competence centre building for self-sufficiency & system access with 24/7 support
- Documented deliverables & stage sign off mitigates risk, time & overspend
