GOVERNMENT OF INDIA**

# **SERVICE LEVELS IN URBAN WATER AND SANITATION SECTOR**

**STATUS REPORT  
(2010 – 2011)**

**FIRST EDITION  
JANUARY, 2012**

शहरी विकास मंत्री  
Minister of Urban Development  
India

## Message

The Ministry of Urban Development, Government of India, is pleased to bring out “Benchmarking Urban Services – 2010-11”. Databook on urban services in India. The publication presents the service levels of over 1400 Municipalities from various States across the country.

The Government of India through Jawaharlal Nehru National Urban Renewal Mission (JnNURM) programme and other schemes has been supporting urban local bodies and State Governments in their endeavours to achieve new standards in service delivery. Recent years have witnessed an unprecedented increase in investments in urban services.

It is of paramount important that the investments in the sector, yield desirable results and tangible improvements in service levels. My Ministry, therefore, has been promoting the measurement of service level improvement against specified standards for core urban services such as water supply, sewerage/sanitation, solid waste management and storm water drainage. It is also noteworthy that the Thirteenth Central Finance Commission has provided for conditional performance grants for States who inter alia commit to disclosure and benchmarking of urban services.

The databook will serve as a useful reference document to guide and encourage urban local bodies across the country to provide better services. It is my firm belief that more municipalities and State Government will participate in a collective endeavor to effectively use available resources to provide the best possible quality of life to the people.

I congratulate all the Municipal and State Governments as well as my colleagues at the Ministry for successfully facilitating this enriching exercise. I thank the Administrative Staff College of India (ASCI) and other organizations for extending capacity building support to States and ULBs in this endeavor.

(Kamal Nath)

## Foreword

The Ministry of Urban Development has, for the first time, brought the **“Service Levels in Urban Water and Sanitation Sector – Status Report (2010-11)”**, a databook comprising service level standards of over 1400 municipalities and municipal corporations from various States in India.

As a part of the ongoing endeavor to improve service delivery in urban areas, the MoUD has introduced the service level benchmarking programme. Service Level Benchmarking (SLB) is an important mechanism for performance management and accountability in service delivery. It involves the measuring the current service levels and monitoring of service provider performance on a systematic and continuous basis. The Ministry has formalized benchmarks for key performance indicators for core urban services such as water supply, sewerage/sanitation, solid waste management and storm water drainage, to enable the local bodies to measure and improve their own performance vis-à-vis the benchmarks.

The 13th Central Finance Commission has endorsed the operationalization of the SLB process by making it mandatory for the States/ULBs to commit to service level improvements to access performance based grants from the Centre.

MoUD is committed to extend support to States and the local bodies operationalize the SLB process and build capacities across institutions. The Administrative Staff College of India is the National Technical Support Unit (NTSU) to extend information and capacity building support to operationalize and sustain SLB process. A number of training programmes and regional workshops were held by the NTSU to support the SLB programme.

In response to the 13 CFC requirements, over 1400 municipal bodies have for the first time notified current service levels (2010-11) and targets for achievement for 2011-12. In addition, this publication includes references to noteworthy practices across the country, which have resulted in improved performance by the local bodies and water utilities/parastatals.

The Ministry encourages State Governments to utilize allocations made under the provision of the 13th CFC grants – under ‘basic’ and ‘performance-based’ category towards improvement in service delivery targets. It also encourages the State and City Governments to avail NTSU’s support in their endeavours.

I would like to place on record my appreciation to all the ULBs and States Governments for initiating the SLB process, I also thank the ASCI, officers of the UD Division of the Ministry and the other organizations concerned for extending capacity building support to the States and Local Bodies in this sector.

(SUDHIR KRISHNA)

## Preface

The publication 'Benchmarking Urban Services -2010-11', presents the service level data of 1400 municipalities in India for the core urban services of water supply, sewerage/sanitation, solid waste management and storm water drainage.

The process of service level benchmarking (SLB) to ensure performance based accountability and optimal use of infrastructure investments was initiated in 2009 by the Ministry of Urban Development, Government of India. A handbook on 'Service Level Benchmarking' was introduced and successfully piloted in 28 cities across India. The programme components comprised development of data books on baseline performance indicators, data system improvement plans and finally performance improvement plans. It has been the endeavour of the MoUD to facilitate compliance by the States and Cities through a massive exercise involving urban local bodies, state governments, parastatal agencies and technical partners.

The Thirteenth Central Finance Commission, recognizing the importance of service level benchmarking, included service level benchmarking as one of the prerequisites to be eligible for performance grants under its provisions, thus enabling a conducive environment for institutionalizing the practice of service level benchmarking.

The Ministry has identified Administrative Staff College of India (ASCI), Hyderabad as the National Technical Support Unit (NTSU) for capacity building support to States and Cities. ASCI has been involved in facilitating this process by undertaking training programmes and regional workshops across States and extended timely information support. Over 1600 officers from State and City governments have participated in these programmes. As a result, over 1400 municipalities and municipal corporations from 13 states have notified their current service levels for 2010-11 and targets for improvement in the year 2011-12. The results reveal much scope for improvement, however, it is a noteworthy precedent and the Ministry is committed to support State/ULB endeavours to scale up improvements. It is envisaged that eventually all Urban Local Bodies will participate in this initiative.

I am grateful to Shri Kamal Nath, Union Urban Development Minister, and Dr. Sudhir Krishna, Secretary, Urban Development, for the constant support and guidance throughout the exercise. I thank the State and local governments, my colleagues in the Ministry, ASCI and other technical partners, all of whom have contributed immensely to this publication.

It is hoped that the document will prove useful for policy makers and practitioners alike and serve as a mirror of progress in urban service delivery.

  
(Arun Goel)

## Benchmarking: A Concept

The urban sector is being increasingly recognized as a critical growth driver for the Indian economy. The share of population residing in urban areas is also witnessing rapid growth—from 28 per cent in 2001, it is projected to rise to 38 per cent by 2026. Basic service levels, however, remain well below desired levels. Investment in infrastructure has not always resulted in commensurate outcomes. There is a need for a shift in focus from infrastructure creation to delivery of service outcomes. The service level benchmarks for the urban water and sanitation sector have been formulated in this context. Service level benchmarks can broadly be defined as a minimum set of standard performance parameters that are commonly understood and used by all stakeholders across the country. This has also become the cornerstone of the urban reform agenda being implemented as part of various centrally sponsored schemes such as the Jawaharlal Nehru National Urban Renewal Mission (JNNURM) and the Urban Infrastructure Development Scheme for Small and Medium Towns (UIDSSMT). It foresees a shift in focus from infrastructure creation to the delivery of service outcomes.

### BENCHMARKING

Benchmarking describes the process of improving performance through continuous identification, understanding and adapting outstanding practices and processes. It is emulating the best by continuously implementing change and measuring performance. It is a process of systematically comparing one's organizational structure, processes and performance against those of good practice organizations nationally and globally, with a view to achieve excellence. Benchmarking provides the key interface between identifying and understanding the key criteria for change and attuning these to the reality of specific organizations. A benchmark is the standard of excellence against which to measure and compare. Benchmarking is the process of learning lessons about how best performance is accomplished. Benchmarking is discovering the specific practices responsible for high performance, understanding how these practices work, and adapting and applying them to the organization.

Benchmarking establishes a point of reference to judge performance on various indicators. It enables cities to discover how far behind their performance in specified areas. It facilitates continuous improvements to systems and processes. It promotes learning culture, helps prevent municipal complacency, allows urban local bodies to focus externally and constantly capture opportunities and counter potential threats, accelerate changes and restructure the systems and processes. It is a tool that provides municipalities with comparative results and as they prepare projects and make investment decisions to improve service delivery.

Benchmarking results in operational, financial and other benefits. It prevents reinventing the wheel, leads to 'outside the box' ideas by looking for ways to improve outside one's own organization, forces organizations to examine present processes, and contributes to accelerate change and restructuring by using tested and proven methods; convincing skeptics who can see how it works; and overcoming inertia and complacency and creating a sense of urgency when gaps are revealed. Moreover, it makes implementation more likely because of involvement of process owner. It allows the organization to focus externally and constantly capture opportunities and counter potential threats. It promotes emergence and evolution of a 'learning culture' in organization and promotes customer focused culture.

Benchmarking is now well recognised as an important mechanism for performance management and accountability in service delivery. It involves the measuring and monitoring of service provider performance on a systematic and continuous basis. Sustained benchmarking can help utilities to identify performance gaps and introduce improvements through the sharing of information and best practices, ultimately resulting in better services to people.

Recognising its importance, the Ministry of Urban Development (MoUD), Government of India, has launched the Service Level Benchmarking (SLB) initiative covering water supply, wastewater, solid waste management (SWM) and Storm water drainage. A Handbook on "**Service Levels in Urban Water and Sanitation Sector – Status Report (2010 – 2011)**" has been developed and released by the MoUD. It seeks to:

- ◆ Identify a minimum set of standard performance parameters for the water and sanitation sector that are commonly
- ◆ Understood and used by all stakeholders across the country;
- ◆ Define a common minimum framework for monitoring and reporting on these indicators; and
- ◆ Set out guidelines on how to operationalize this framework in a phased manner.

### THE 13<sup>th</sup> FINANCE COMMISSION (FC)

The FC noted the dilution of standards in the services provided by the local bodies. With a view to improve service delivery, the FC included the SLB as one of the nine mandatory conditions to be complied by the states and cities to access the performance grant of about Rs.8,000/- crores it recommended for the urban local bodies. Condition 8 of the FC states that:

*State Governments must gradually put in place standards for service delivery of all essential services provided by the local bodies.....State Government must notify or cause all municipal corporations and municipalities to notify by the end of fiscal year (31 March) the service standard for four service sectors-water supply, sewerage, storm water drainage and solid waste management proposed to be achieved by them by the end of the succeeding fiscal year .....all municipalities and municipal corporations in the state .....will provide a specified minimum level of service for each of the indicators for the four sectors.....such a commitment to be achieved through a consultative process with the local bodies.....a notification will be published in the State Government gazette and the fact of publication will demonstrate compliance with this condition.*

### SLB ROLLOUT STRATEGY

The MoUD to give effect to the FC recommendation and to help the states and urban local bodies launched a national rollout strategy is to extend capacity building and hand-holding support to the functionaries of state and urban local bodies to enable them to comply with the conditions of the FC including commitment to a minimum level of service standards and to define actions towards realizing the standards. As part of this strategy MoUD established a **National Technical Support Unit (NTSU)** at ASCI.

The NTSU is responsible for and undertook the following activities:

- ◆ timely clarifications and technical support on service level benchmarking;
- ◆ established a *SLB Helpline* for purposes of rollout;
- ◆ hosted a dynamic *Web Portal* for knowledge support and exchange;
- ◆ developed a comprehensive *database* on service levels;
- ◆ extended support to state level SLB Cells city level SLB teams;
- ◆ organized training workshops at state/regional and city levels on SLB on a demand –response basis;
- ◆ supported preparation of city level data books and information on baseline service levels and targets for the year 2011-12;

### METHODOLOGY

#### FORMATION OF STATE LEVEL SLB CELL

To operationalise the service level Benchmarking process in the States, MoUD advised the states to constitute State SLB Core Team consisting of senior functionaries from the State Urban Development departments, Parastatals, etc. They were headed by State level Nodal Officer. Accordingly most states formed the teams. They were responsible to organize training to city level teams and other officials, extend hand-holding support to them where needed, coordinate database management at state level and to facilitate notification of baseline data and targets for the year 2011-12.

Cities were encouraged to form City Level SLB Cell consisting of officials from water supply, sewerage, storm water drainage and solid waste management. After training they were responsible for generation of baseline data, data validation, and fixation of targets for 2011-12 and to prepare subsequently performance improvement plans.

### ORIENTATION WORKSHOPS

The NTSU organized state/regional level workshops (November 2010- February 2011) for members of State Level Core teams and City level SLB cell. These workshops presented the rationale for SLB, framework details, questionnaires for data collection and the programme implementation plan. Details of each of the indicators were explained and this was followed by discussion.

The City was given support in identifying appropriate data sources, collecting data as per the questionnaires, coordinating clarifications on definitional, methodological issues, etc. The orientation sessions helped in creating awareness for the operational staff, clarify data requirements and design strategies for gathering data.

### VALIDATION OF DATA

At the workshops the cities brought basic data on all the indicators. Validation of the data was undertaken to ensure consistency between the data collected and the definitional requirements of the Handbook. The process entailed a review of the data collected by the city level SLB team, followed by modifications or corrections where necessary. After the data validation, support was extended to the States for target fixation.

The SLB baseline data and targets for 2011-12 notified by the State Governments were compiled by NTSU and presented in this volume on “**Service Levels in Urban Water and Sanitation Sector – Status Report (2010 – 2011)**”.

## Benchmarks at a Glance

The framework encompasses 28 indicators reflecting multiple facets of service delivery performance.

Indicator	National Benchmark
<b>WATER SUPPLY</b>	
1 Coverage of Water Supply Connections	100%
2 Per capita availability of water at consumer end	135 lpcd
3 Extent of metering of water connections	100%
4 Extent of non-revenue water	20%
5 Continuity of Water Supply	24X7
6 Adequacy of Treatment and Disinfection and Quality of Water Supplied	100%
7 Efficiency in redressal of customer complaints	80%
8 Cost recovery in water supply services	100%
9 Efficiency in collection of water supply related charges	90%
<b>SEWAGE MANAGEMENT</b>	
1 Coverage of Toilets	100%
2 Coverage of Waste sewerage Network Services	100%
3 Collection Efficiency of Waste Water Network	100%
4 Adequacy of waste water treatment capacity	100%
5 Quality of sewage Treatment	100%
6 Extent of reuse and recycling of sewage	20%
7 Efficiency in redressal of customer complaints	80%
8 Extent of cost recovery in sewage management	100%
9 Efficiency in collection of sewerage charges	90%
<b>SOLID WASTE MANAGEMENT</b>	
1 Household level coverage of Solid Waste Management services	100%
2 Efficiency of collection of municipal solid waste	100%
3 Extent of segregation of municipal solid waste	100%
4 Extent of municipal solid waste recovered/recycled	80%
5 Extent of scientific disposal of municipal solid waste	100%
6 Efficiency in redressal of customer complaints	80%
7 Extent of cost recovery in solid waste management services	100%
8 Efficiency in collection of SWM charges	90%
<b>STORM WATER DRAINAGE</b>	
1 Coverage of Storm Water Drainage Network	100%
2 Incidence of water logging/ flooding	0%

## Service Level Benchmarking Indicators

The framework encompasses 28 performance indicators:

Apart from the definition for each of the SLB indicators, the Handbook specifies a system of rating the reliability of measurements for each of the indicators. The reliability scale incorporates the following grading system:

- A: Highest/preferred level of reliability using accurate measurements of values.
- B: Intermediate level using estimates of parameter values required.
- C: Intermediate level using less accurate estimates of parameter values.
- D: Lowest level of reliability using surrogate parameters or least reliable estimates.

The reliability scale associated with each SLB indicator is defined in the Handbook in terms of availability and accuracy of measurements, frequency of collection and recording of the parameters that define the indicator. The rating has nothing to do with the indicator value itself (whether it is high or low) but only on the reliability of the value given.

Service level performance parameters have been identified in the Handbook for four basic urban services, namely water supply; sewerage; solid waste management; and storm water drainage. These cover aspects related to service delivery, operating efficiency and financial sustainability. For each of these indicators, the Handbook provides detailed guidelines on the definition, calculation methodology, monitoring guidelines, a service goal (to be achieved over a period of time) and data reliability grading scale.

The SLB initiative aims to overcome challenges faced in earlier benchmarking exercises in the following ways:

- Uniform set of indicators, definitions and calculation methodology to enable meaningful comparisons
- Provision of service benchmarks to create consensus on desired service standards
- Data reliability grades to highlight and address issues of data quality
- Self-reporting by Urban Local Bodies (ULBs), as against consultants, to ensure ownership for data
- Emphasis on performance improvement planning based on the SLB data generated.

### WATER SUPPLY

Water is a basic need, and emphasis has been laid on performance related to access to quality service and effectiveness of the systems to manage water supply networks. Since financial sustainability is critical for continued effectiveness in service delivery, performance is measured on this aspect too. Indicators selected, along with their definitions, are:

#### *Coverage of water supply connections*

Coverage of water supply connections is measured as the total number of households in the service area that are connected to the water supply network with direct service connections, as a percentage of the total number of households in that service area. Service area implies a specific jurisdiction in which service is required to be provided. The indicator is expressed as a percentage. The emphasis here is on the number of households and not properties. In addition, the indicator includes only direct tap connections; water supplied through tankers or public stand posts, bore wells and open wells has been excluded.

#### *Per capita supply of water*

Per capita supply of water is measured as the total water supplied to consumers by population served per day. The indicator is expressed as liters per capita per day. This indicator is calculated at the consumption end.

### **Extent of metering of water connections**

The extent of metering of water connections is measured as the total number of functional metered water connections expressed as a percentage of the total number of water supply connections. Public stand post connections that are metered are included. The indicator is expressed as a percentage.

### **Extent of non-revenue water (NRW)**

This indicator highlights the extent of water produced, which does not earn the utility any revenue. This is computed as the difference between the total water produced (ex-treatment plant) and the total water sold, expressed as a percentage of the total water produced. The total supply should also include water that may have been purchased directly from other sources and put into the distribution system. NRW comprises

- a) Consumption that is authorized but not billed, such as public stand posts;
- b) Apparent losses such as illegal water connections, water theft and metering inaccuracies; and
- c) Real losses that are leakages in the transmission and distribution networks. The indicator is expressed as a percentage.

### **Continuity of water supply**

Continuity of supply is measured as the average number of hours of pressurized water supply per day. The measurement excludes hours of supply where the pressure is less than the minimum pressure standards for piped water supply.

The indicator is expressed in hours per day.

### **Quality of water supplied**

Quality of water supplied is measured as the percentage of water samples that meet or exceed the specified potable water standards, as defined by the Central Public Health and Environmental Engineering Organization (CPHEEO). The samples include those drawn at both points – the outlet of the treatment plant and at the consumer end.

### **Efficiency in redressal of customer complaints**

This indicator is measured as the total number of water supply-related complaints redressed within 24 hours of receipt of the complaint, as a percentage of the total number of water supply-related complaints received in the given time period (in a month).

### **Cost recovery in water supply services**

This indicator is measured as the total operating revenues expressed as a percentage of the total operating expenses incurred in the corresponding time period. Only income and expenditure of the revenue account have been considered, and income and expenditure from the capital account have been excluded. The calculation excludes the collection of interest payments, principal repayments and other capital expenses. The calculation for annual operating revenues excludes capital income such as grants, loans and so on. Depreciation costs do not feature in this calculation.

### **Efficiency in collection of water supply-related charges**

Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period. The calculation excludes the collection of arrears and is based only on current revenues.

## **Wastewater Management**

For sewage management, performance related to reach and access of the service, effectiveness of the network, and environmental sustainability have been emphasized, apart from financial sustainability of operations. Indicators selected are:

### **Coverage of toilets**

This indicator denotes the extent to which citizen have access to a toilet (whether individual or community) in a service area. The toilets include those in the category of residential, commercial, industrial and institutional properties. The emphasis here is on the total number of toilets and not households. The service area implies a specific jurisdiction in which the service is required to be provided. The indicator is expressed as a percentage.

### **Coverage of sewage network services**

This indicator denotes the extent to which the underground sewage (or sewerage collection) network has reached out to individual properties across the service area. Properties include those in the categories of residential, commercial, industrial and institutional. Properties that connect their sewerage outlet to storm water drains or open drains are not considered. The service area implies a specific jurisdiction in which the service is required to be provided. The indicator is expressed as a percentage.

### **Collection efficiency of sewage network**

This indicator is measured as the quantum of wastewater collected as a percentage of the normative sewage generation in the ULB. Wastewater generation is linked to the quantum of water supplied through piped systems, and other sources such as bore wells, when they are very extensively used. The quantum of wastewater is measured at the inlet of wastewater treatment plants. Data are collected daily for an entire month, for measuring the quantities per month. While daily variations may be normalized, monthly variations may exist on account of seasonal variations. Data are aggregated from multiple points across the ULB.

### **Adequacy of sewage treatment capacity**

Adequacy is expressed as secondary treatment (that is, removing oxygen demand as well as solids, normally biological) capacity available as a percentage of normative wastewater generation, for the same time period. The indicator is expressed as a percentage.

### **Quality of sewage treatment**

Quality of treatment is measured as a percentage of wastewater samples that pass the specified secondary treatment standards, that is, treated water samples from the outlet of sewerage treatment plants (STPs) are equal to or better than the standards laid down by GoI agencies for secondary treatment of sewage. While the samples are collected at the STP outlet and results computed per STP, this indicator is reported at city/ULB level.

### **Extent of reuse and recycling of sewage**

This indicator is measured as the percentage of wastewater received at the treatment plant that is recycled or reused after appropriate treatment for various purposes. This considers water that is directly conveyed for recycling or reuse, such as for use in gardens and parks or for irrigation, and so on. Water that is discharged into water bodies, which is subsequently used for a variety of purposes, is not included in this quantum. While measurements are done at STP inlets and outlets, the indicator is reported at the city/ULB level as a whole.

### **Efficiency in redressal of customer complaints**

This indicator is measured as the total number of sewage-related complaints redressed within 24 hours of receipt of complaints, as a percentage of the total number of sewage-related complaints received in the given time period, that being a month.

### **Extent of cost recovery in sewage management**

The extent of cost recovery is expressed as wastewater revenues as a percentage of wastewater expenses, for the corresponding time period. The indicator is expressed as a percentage. The operating expense excludes interest payments and principal repayments. The annual operating revenues include all wastewater related revenues billed for the year including taxes, cess or surcharges, user charges, connection charges, sale of sludge, sale of recycled water and so forth.

### **Efficiency in collection of sewage-related charges**

Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period.

### **Solid Waste Management**

Performance related to access, effectiveness of operations and environmental sustainability has been considered, apart from financial sustainability of operations. Indicators selected are:

#### **Household level coverage of solid waste management services**

This indicator is expressed as the percentage of households and establishments that are covered by a daily doorstep collection system. The total number of households includes doorstep collection by the ULB itself or ULB-approved service providers, including door-to-door collection systems operated by resident welfare associations and so on.

#### **Efficiency of collection of municipal solid waste**

This indicator is expressed as the total waste collected by the ULB and authorized service providers versus the total waste generated within the ULB, excluding recycling or processing at the generation point. (Typically, some amount of waste generated is either recycled or reused by the citizens themselves. This quantity is excluded from the total quantity generated, as reliable estimates will not be available for these.) The indicator is expressed as a percentage.

#### **Extent of segregation of municipal solid waste**

This indicator is expressed as the percentage of segregated waste from households and establishments. Segregation is at the level of separation of wet and dry waste at the source, that is, at the household or establishment level. Ideally, the separation is in the following categories: biodegradable waste, waste that is non-biodegradable and hazardous domestic waste such as batteries, and so on. In line with this description, the ULB can further refine the criteria for classifying waste as being 'segregated'. It is important that waste segregated at the source is not again mixed, but transported through the entire chain in a segregated manner. It is therefore important that this indicator is based on measurement of waste arriving in a segregated manner at the treatment/disposal site, rather than being measured at the collection point. The quantum of waste that is segregated includes waste taken away by recyclers from intermediate points.

#### **Extent of municipal solid waste recovered**

This indicator is expressed as the quantum of waste collected, which is either recycled or processed. This is expressed in terms of percentage of waste collected. Waste collected at intermediate points by informal mechanisms (rag pickers and so forth) and fed back into the recycling chain are included in this quantity. The indicator is expressed as a percentage.

#### **Extent of scientific disposal of municipal solid waste**

This indicator is expressed as the amount of waste that is disposed in landfills that have been designed, built, operated and maintained as per standards laid down by central agencies. This extent of compliance is expressed as a percentage of the total quantum of waste disposed at landfill sites, including open dumpsites. The indicator is expressed as a percentage.

### **Efficiency in redressal of customer complaints**

This indicator is expressed as the total number of SWM-related complaints redressed within 24 hours of receipt of the complaint, as a percentage of the total number of SWM-related complaints received in the given time period. The indicator is expressed as a percentage.

### **Extent of cost recovery in SWM services**

This indicator denotes the extent to which the ULB is able to recover all operating expenses of SWM services from operating revenues of sources related exclusively to SWM. This indicator is defined as the total annual operating revenues from SWM as a percentage of the total annual operating expenses on SWM.

### **Efficiency in collection of SWM-related user-related charges**

Efficiency in collection is defined as current year revenues collected, expressed as a percentage of the total operating revenues, for the corresponding time period.

### **Storm Water Drainage**

The extent and effectiveness of the network are emphasized to assess storm water drainage system performance. As this service does not yield any direct revenues, financial sustainability is not considered.

Indicators selected are:

#### **Coverage of storm water drainage network**

Coverage is defined in terms of the percentage of road length covered by the storm water drainage network. Here only the drains that are made of pucca (that is, permanent) construction and are covered are considered. The indicator is expressed as a percentage.

#### **Incidence of water logging/flooding**

This indicator is expressed as the number of times water logging is reported in a year, at flood-prone points within the city. The indicator is expressed as numbers per year.

# SLB RANKING

### SLB Ranking for Indicator Values

Current service status of all the notified ULBs are ranked. Following table indicates color range for all the 28 indicators

Water Supply	Benchmark	Median	Average	GREEN	BLUE	BLACK	RED
Coverage connections	100%	53.0	50.2	>75	50-75	25-50	0-25
Per capita supply	135 lpcd	69.0	69.2	>100	70-100	35-70	0-35
Metering of connections	100%	0.0	13.3	>75	50-75	25-50	0-25
Non-revenue water (NRW)	20%	29.0	32.9	<20	20-30	30-50	0-50
Continuity of supply	24 Hours	2.0	3.1	20-24	10-20	5-10	0-5
Quality & Treatment	100%	94.0	81.7	100	80-100	40-80	0-40
Redressal of customer complaints	80%	75.0	72.9	>80	50-80	25-50	0-25
Cost recovery	100%	32.0	38.8	>75	50-75	25-50	0-25
Efficiency in collection charges	90%	63.0	58.7	>90	60-90	30-60	0-30

### Sewerage

Coverage of toilets	100%	72.6	69.5	>90	70-90	35-70	0-35
Coverage of sewage network services	100%	0.0	12.2	>70	40-70	0-40	0

# **STATE LEVEL ANALYSIS**

<b>ANDHRA PRADESH</b>						
Andhra Pradesh is situated on the southeastern coast of India. It is India's fourth largest state by area and fifth largest by population.						
◆	Population(2011) : 84665533					
◆	Area(2011) : 275,045 Sq.Kms.					
◆	Urbanization (%) (2011 estimated): 27%					
◆	No of ULBs which have notified the data : 124					
<b>Institutional Arrangements for Water Supply and Sewerage</b>						
◆	Capital Works: PHED					
◆	O&M: Municipal Body					
◆	Revenue Functions: Municipal Body					
						
<b>State level scenario for water supply:</b>	<b>Service Level Indicators for Water Supply</b>					
There is no consumer metering except for 40 ULBs. The commercial connections are metered and charged volumetrically. The higher percent of NRW (100%) exists in Manuguru and Piduguralla which attributes to supply of water through PSPs (which is not billed) and water supply through tankers to unserved areas of the ULB and also people depending on their own sources. The domestic tariff structure is based on flat rate except for few ULBs, where billing is done on basis of volumetric consumption.	<b>Indicators</b>	<b>Median</b>	<b>Mean Count</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Water supply coverage	33.6	124	37	0	92
	Per capita consumption	66.7	124	69	8	151
	Consumption metering	0	40	3	0.1	40
	Non-Revenue Water	33.1	123	41	17	100
	Continuity of water supply	1.5	124	1.5	0.3	6
	Complaints redressal	88.3	124	84	40	100
	Quality of water supplied	100	124	95	44	100
	Cost recovery: water supply	45.8	124	52	0	162
	Collection Efficiency	56.2	124	52	0	93
<b>State level scenario for Sewerage:</b>	<b>Service Level Indicators for Sewerage</b>					
The average coverage of toilets in the state is on higher side due to the effective implementation of ILCS in the state in the slum areas. Majority of the ULBs does not have Sewerage system. Usually onsite sanitary disposal methods for disposing human waste are practiced. For kitchen and domestic waste, it is being let into open and closed drains. In absence of sewerage system, ULBs does not pose STP and hence no reuse and recycling of waste water are possible in this context. Hence, the other indicator values are not applicable and state average cannot be computed.	<b>Indicators</b>	<b>Median</b>	<b>Mean Count</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Coverage of Toilets	79	124	77	33	98.5
	Sewerage network coverage	-	9	31	9	46
	Wastewater collection efficiency	-	5	56	40	80
	Wastewater treatment adequacy	-	5	66	47.5	100
	Quality of waste water treatment	-	5	98	92	100
	Reuse and recycling of treated wastewater	-	-	-	-	-
	Cost recovery: wastewater	-	-	-	-	-
	Collection efficiency	-	-	-	-	-
	Complaints redressal	-	-	-	-	-
<b>Institutional Arrangements for Solid Waste Management and Storm Water Drainage</b>						

Capital Works: Municipal Body	O&M : Municipal Body					
<b>State level scenario for SWM:</b>	<b>Service Level Indicators for SWM</b>					
The practice of door to door collection in the state is carried out by the ULB or its authorized service provider. There is no mechanism to calculate the amount of waste collected by the ULB as there is no weigh bridges installed near the majority of the dumpsites. It is interesting to note that, smaller municipalities like Suryapet and Jaggiahpetta carry out segregation and processing of waste. Informal practice of segregation is done by the rag pickers at dumpsites in many of the ULBs. The ULBs have their citizen charter to record and redress the customer complaints.	<b>Indicators</b>	<b>Median</b>	<b>Mean</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Household level coverage	79.05	124	73	6.5	97
	Efficiency of collection of MSW	90	124	87	31.7	100
	Segregation of MSW	-	17	23	0.4	70
	MSW Recovery	-	12	18	1.3	80

	Cost recovery: SMW	-	-	-	-	-
	Collection efficiency	-	-	-	-	-
	Complaints redressal	84.3	124	82	0	100
	<b>State level scenario for Storm Water Drainage:</b>	<b>Service Level Indicators for Storm Water Drainage</b>				
The presence of storm water drains can be found in few ULBs as the drains are not covered and left open. In majority of cases the incidence of water logging and its frequency is not recorded and is based on complaints and feedback of citizens.	<b>Indicators</b>	<b>Median</b>	<b>Mean</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Drainage network coverage	64	124	69	0	168
	Incidence of water logging	4	124	15	0	351

## BIHAR

It is the 12th largest state in terms of geographical size and 3rd largest by population. The Bihar plain is divided into two parts by the river Ganges which flows through the middle from west to east.

◆ Population(2011): 103804637	
◆ Area(2011): 94,163 sq.km	
◆ Urbanisation%(2011 estimated): 9.9%	
◆ No of ULBs which have reported the data: 52	
<b>Institutional Arrangements for Water Supply and Sewerage</b>	
◆ Capital Works: PHED	
◆ O&M:PHED	
◆ Revenue Functions: Municipal Body	

<b>State level scenario for water supply:</b>	<b>Service Level Indicators for Water Supply</b>					
There is no consumer metering in any of the ULBs of Bihar. Average percent of water quality which is being supplied is 42%. Average of Cost recovery and collection efficiency is 32%, while highest value reported in this indicator is 50% reported by Patna. The average Percapita consumption at the consumer end for the state is reported as 29 lpcd.	<b>Indicators</b>	<b>Median</b>	<b>Mean</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Water supply coverage	11.7	41	17	1.2	78
	Per capita consumption	27.5	42	29	8	77
	Consumption metering	-	52	0	0	0
	Non-Revenue Water	50	42	48	30	50
	Continuity of water supply	4	42	4.7	2	12
	Complaints redressal	50	42	80	80	80

## KERALA

Kerala is an Indian state located on the Malabar coast of south-west India. It was created on 1 November 1956 by the States Reorganisation Act, and it combined various Malayalam speaking regions

◆ Population(2011): 3,33,87,677						
◆ Area(2011):38,863 Sq.Kms.						
◆ Urbanisation(%) (2011 estimated): 26.4%						
◆ No of ULBs which have reported the data:65						
<b>Institutional Arrangements for Water Supply and Sewerage</b>						
◆ Capital Works: KWA						
◆ O&M:KWA						
◆ Revenue Functions: KWA						
<b>State level scenario for water supply:</b>	<b>Service Level Indicators for Water Supply</b>					
The average for Coverage of water supply is 65% in the state while the state has good coverage of metering (i.e. average of 65 percent) in all the ULBs. The Percapita supply at the consumer end varies from 10 lpcd to 165 lpcd (the average being 65 lpcd). The continuity of water supplied varies from 1 hour to 22 hours in the state capital. PSPs are also billed by KWA to the respective ULBs on monthly basis.	<b>Indicators</b>	<b>Median</b>	<b>Mean Count</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>
	Water supply coverage	38	65	37	0.5	92.4
	Per capita consumption	59	65	64	1.9	165
	Consumption metering	82.3	65	80	39	97
	Non-Revenue Water	28	65	29	11.1	50
	Continuity of water supply	7.5	65	8.8	1	22
	Complaints redressal	77	65	71.9	0	100
	Quality of water supplied	92.4	65	84.3	30	100
	Cost recovery: water supply	40	65	43	18	80
	Collection Efficiency	75	65	68	0	100
<b>State level scenario for Sewerage :</b>	<b>Service Level Indicators for Sewerage</b>					
The average for Coverage of toilets for ULBs is 85% with Kothamangalam reporting as 100%. Only two ULBs have reported for sewerage network coverage- Kochi (5%)and Tiruvanthapuram(30%) indicating no sewerage network in the other ULBs. Hence, the other indicators are not applicable and state averages for cannot be computed.	<b>Indicators</b>	<b>Median</b>	<b>Mean Count</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>

UTTAR PRADESH							
Uttar Pradesh is a state located in the northern part of India. With a population of over 199 million people, it is India's most populous state, as well as the world's most populous sub-national entity.							
◆ Population(2011): 199581477							
◆ Area(2011): 243286 Sq.Kms.							
◆ Urbanisation(2011 estimated):22.1%							
◆ No of ULBs which have reported the data: 206							
<b>Institutional Arrangements for Water Supply</b>							
◆ Capital Works: Jal Nigam, Municipal Body							
◆ O&M:Jal Sansthan, Municipal Body							
◆ Revenue Functions: Jal Sansthan, Municipal Body							
<b>State level scenario for Water Supply:</b>		<b>Service Level Indicators for Water Supply</b>					
There is no domestic metering except for the ULBs Agra(0.03%), Jhansi(39.5%) and Ghaziabad(4.5%). No ULB in the state has achieved continuous water supply.  *The averages computed are only for the ULBs which have reported the values which has been indicated as Mean Count in the table.		<b>Indicators</b>	<b>Median</b>	<b>Mean Count</b>	<b>Average</b>	<b>Min.</b>	<b>Max.</b>

# **STATE WISE COMPARISON**

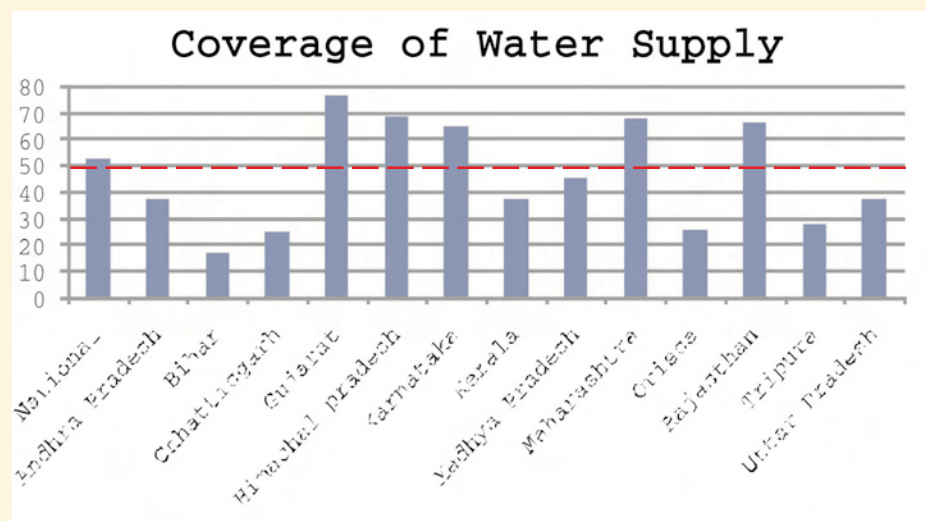

After working closely with city officials in the 13 selected states, the National Technical Support Unit from ASCI observed that there is a tremendous pressure on the civic infrastructure facilities and the the ULBs are unable to cope with the demand for the essential services. This is the chief cause for gaps in provision of service delivery. While economic growth and opportunity access among populations have led to enormous increase in urban populations, there has been no corresponding expansion of infrastructure nor any upgrading of the administrative management systems.

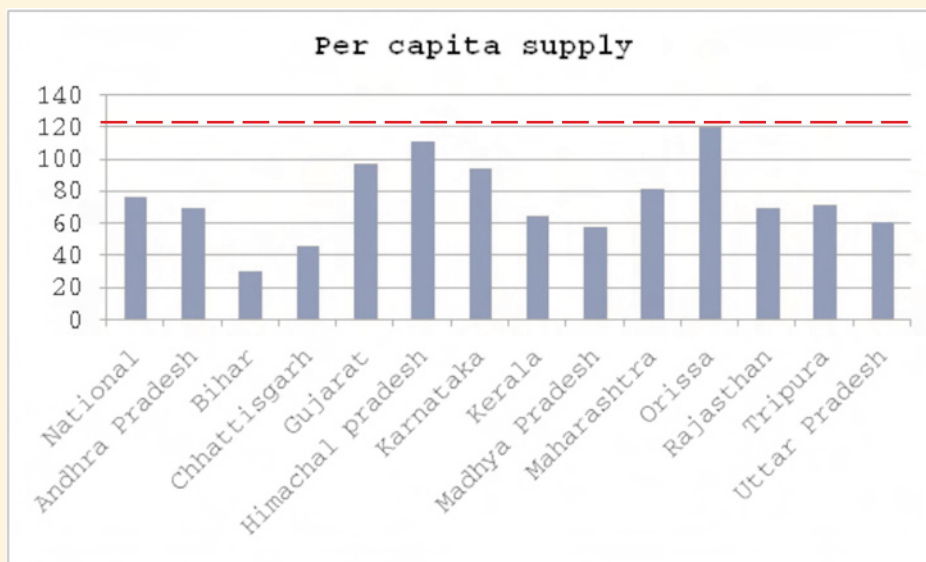

The following comparative performance levels of the state is based on the data notified by 13 states for service level benchmarking in the four sectors of Water Supply, Sewerage, Solid Waste Management and Storm Water Drainage.

### WATER SUPPLY

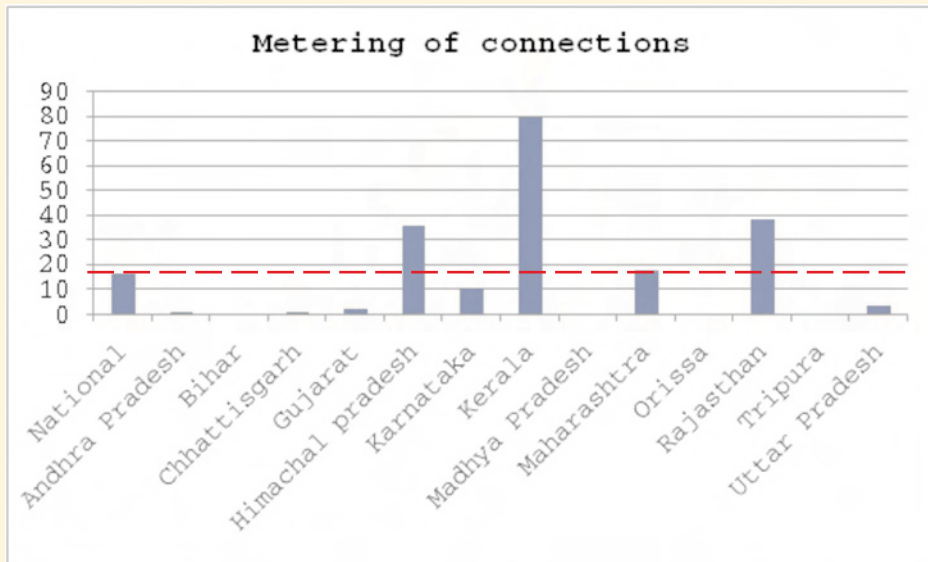

This data indicates the quantitative and qualitative aspect of water supply. The national average for coverage of water connections is 52 percent and metering of connections is mere 16 percent. The water supply is available for 3 hours per day across the cities and towns, whereas the quality of water supplied is 85 percent. The non-revenue water which includes physical and revenue losses account for 34 percent of the total water supply. Looking into the financial aspect of water supply, the cost recovery is 40 percent and efficiency in collection charges is 62 percent.

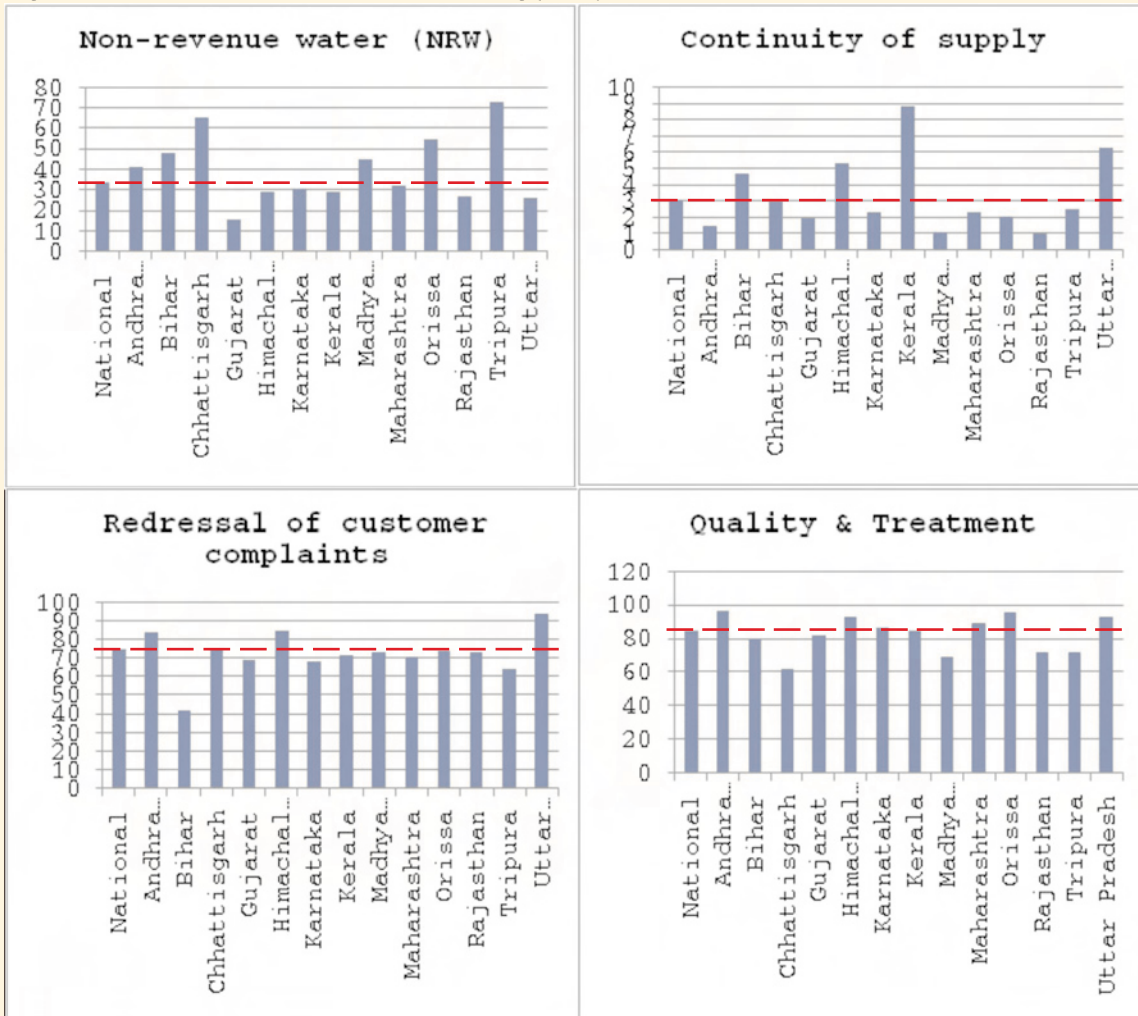

The National Average for coverage of water connections is 52. It can be seen that most of the states are below this average, just five of them above, with Gujarat ranking the highest.

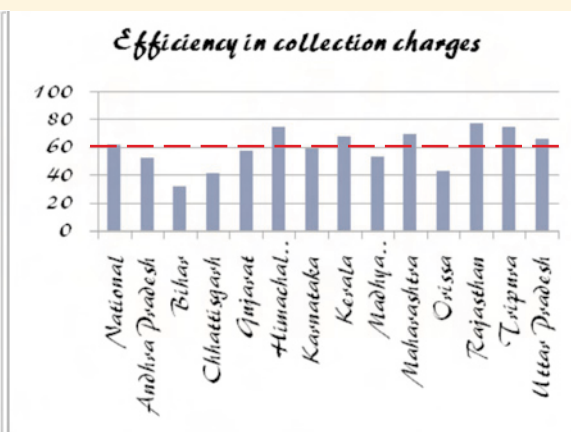

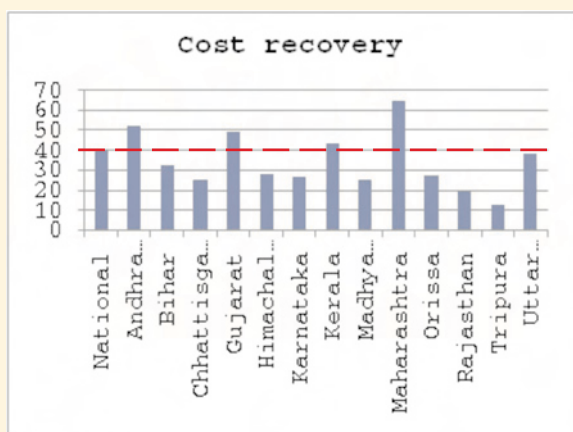

The National Average for Per Capita supply of water is 76lpcd. It can be seen that Orissa and Himachal Pradesh are providing 120 and 110 lpcd respectively.

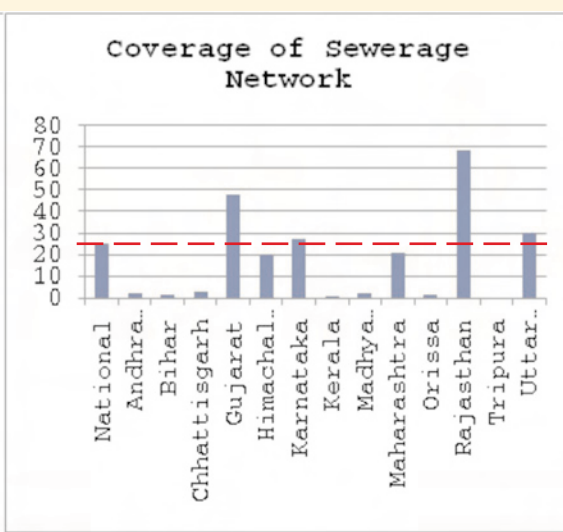

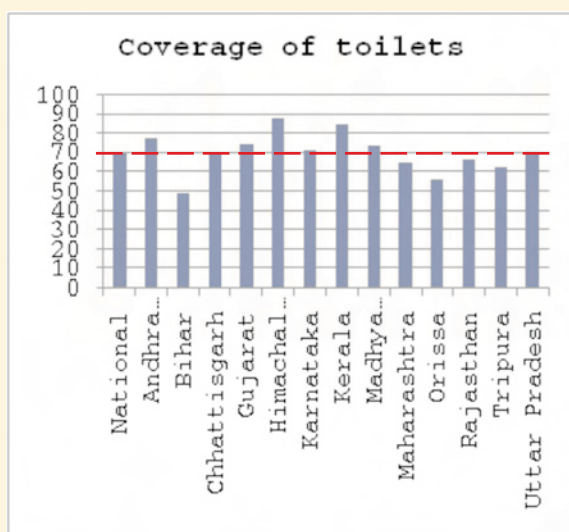

The National Average of Metering of connections is 16. It can be seen that Kerala has the highest percentage of metering of connections at 79% due to its metering policy.

### SEWERAGE

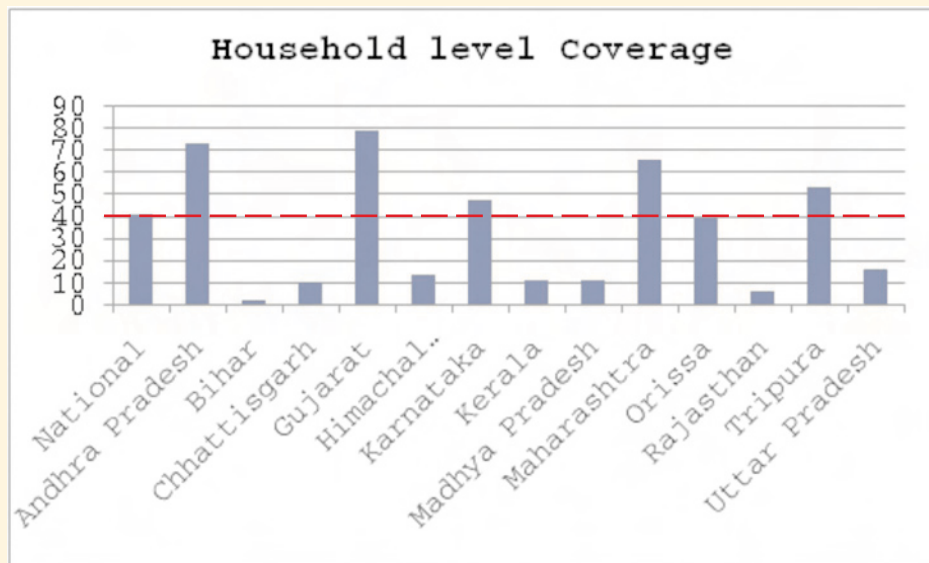

The National average of coverage of toilets is reported as 70 percent. Most of the states have reported this indicator above 60 percent as there are various schemes like ILCS, IHSDP for construction of individual and community toilets. Only 25 percent of the households have sewer connections and the rest depend on onsite sanitary disposal or no connection at all. As the coverage of sewerage network is very low and absence of STPs in almost all the cities, the other indicator values reported is meager.

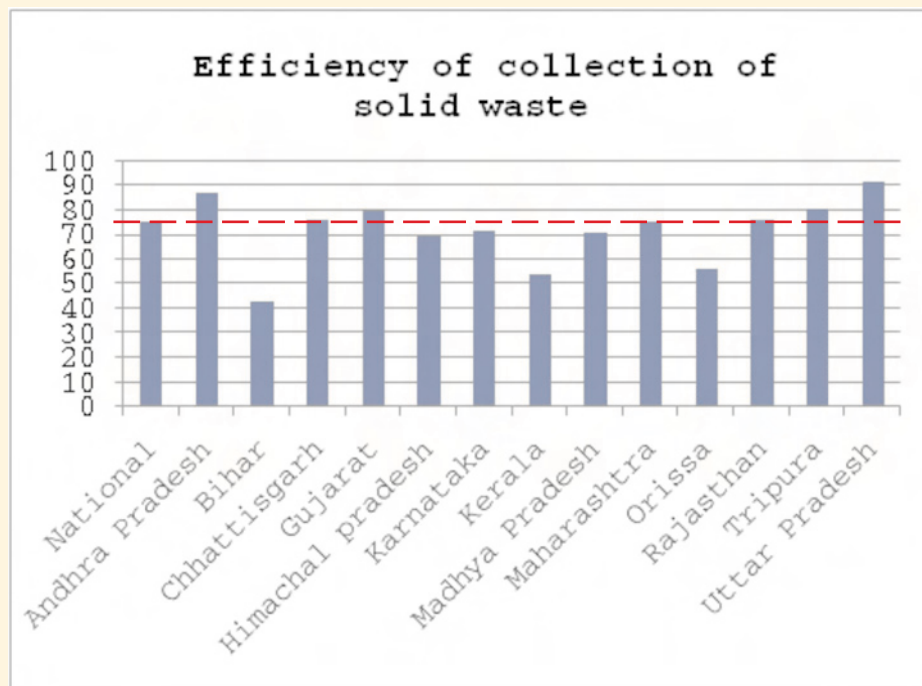

Coverage of sewerage network is very poor in most of the states. There are no underground drainage systems in most of the cities.

### SOLID WASTE MANAGEMENT

The national average for household level coverage is reported as 40 percent, indicating that door-to-door collection of solid waste is practiced only in few cities and towns across the country. The efficiency of collection of solid waste is reported at 75 percent. The waste collected is directly dumped into the dumpsite without any segregation and processing in almost all the states. Informal practice of segregation is done by rag-pickers at the dumpsites in most of the cities. The solid waste systems are severely stressed indicating the deteriorating quality of environment in the cities.

National Average of Household level coverage is 40%. It can be seen that door-to-door collection is the least in the states of Bihar and Uttar Pradesh, as it is practiced only in the Municipal Corporations. Gujarat ranks the best with 78%.

### STORM WATER DRAINAGE

The National average for coverage of storm water drainage is reported as 46 percent. Few states reported high incidents of water logging / flooding due to insufficient storm water drainage coverage. The average number of points of water logging at national level is reported as 10.

Storm Water Drainage	Coverage	Incidence of Water logging
National	46	10
Andhra Pradesh	69	15
Bihar	34	2
Chhattisgarh	27	5
Gujarat	34	1
Himachal pradesh	13	6
Karnataka	52	4
Kerala	9	23
Madhya Pradesh	54	5
Maharashtra	60	8
Orissa	4	9
Rajasthan	60	11
Tripura	2	28
Uttar Pradesh	52	23

**CLASSIFICATION OF CITIES ACCORDING TO THE  
POPULATION AND ANALYSIS**

---

### CITY GRADING ACCORDING TO POPULATION SIZE :

The notified 1405 ULBs were classified into classes based on the population as given in the table below.

S.No.	Class	Population
1.	IA	>5 Million
2.	IB	1-5 Million
3.	IC	100000-1 Million
4.	II	50000-100000
5.	III	20000-50000
6.	IV	<50000

Six Cities fall under IA category- Hyderabad, Delhi, Bangalore, Greater Mumbai, Chennai and Kolkata. Rest of the cities has been categorized according to their population sizes. Major ULBs fall under the Class IV cities of categorization.

Median is used for the analysis of service level performance across various classes. Median is described as a numerical value separating the higher half of a sample from the lower half. Averages can be thrown off by extreme values, but medians are less susceptible to inaccuracies.

The Medians of the following categories have been calculated sector and indicator wise.

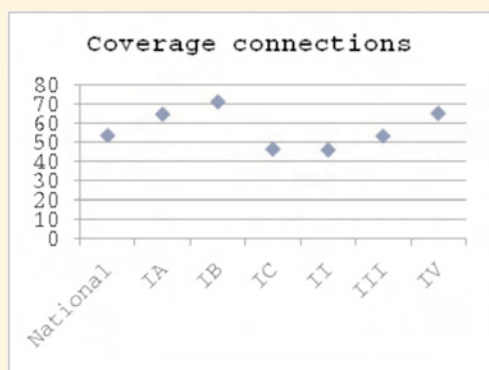

#### WATER SUPPLY

Water Supply	Coverage connections	Per capita supply	Metering of connections	Non-revenue water	Continuity of Supply	Quality & Treatment	Redressal of customer of complaints	Cost recovery	Efficiency in collection charges
National	53.3	70.0	0.0	30.0	2.0	95.0	76.0	33.0	65.0
IA	64.5	109.0	48.0	30.5	1.8	67.5	75.0	96.0	78.5
IB	71.0	112.0	0.0	31.3	3.0	96.2	82.0	50.0	80.0
IC	46.1	75.0	0.0	32.0	2.0	95.0	78.0	36.0	60.0
II	45.7	70.0	0.0	30.0	2.0	95.0	78.0	33.0	66.0
III	53.0	70.0	0.0	30.0	1.5	95.3	76.0	33.6	65.0
IV	65.0	71.9	0.0	30.0	2.0	93.5	75.0	23.7	70.0

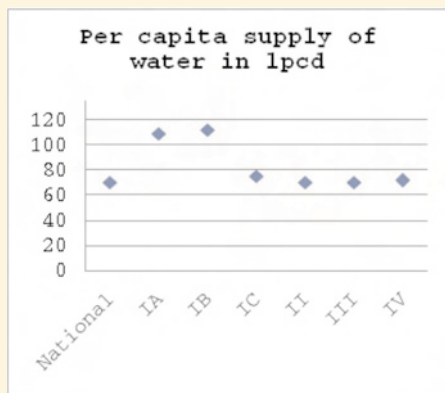

Note: The blue coloured boxes indicate the highest figure for that particular indicator

It can be seen that, IB class cities have fared better in almost all the indicators of Water supply. In the indicators related to metering of connections and cost recovery, IA class cities i.e. Municipal Corporations have performed well. It is interesting to note that, 50% of the class IV cities have reported NRW below 30.

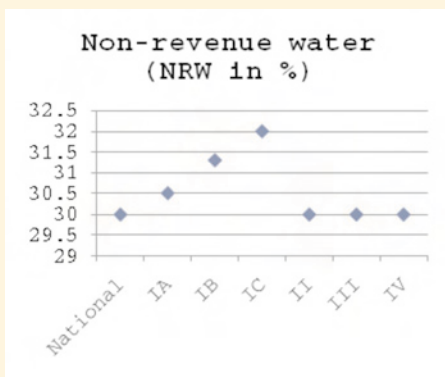

#### Indicator wise Median Analysis for Water Supply

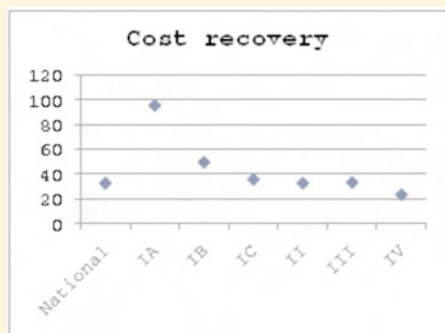

The median for coverage of water supply is higher in Class IB towns compared to the national and the IA towns. When compared to the Classes of IC, II and III, the class IV towns have better access to individual water supply connections.

The Per capita supply of water in lpcd is higher for Class IB towns. The national level median value stand at 70 lpcd while the Class IV towns have the median value of 71.9 lpcd

The value of NRW is reported in Class IC towns where the value stands at 32 percent is the highest among all categories of ULBs. The national level is reported as 30 percent.

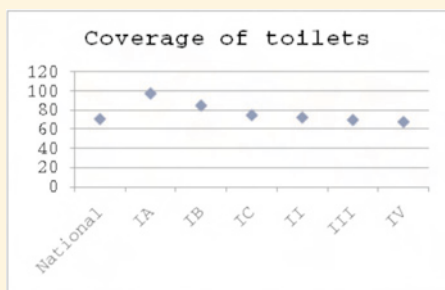

The median value for cost recovery for the water supply services for Class I is reported highest as 96 percent. The value reported for other categories ranges from 20- 40 percent.

## SEWERAGE

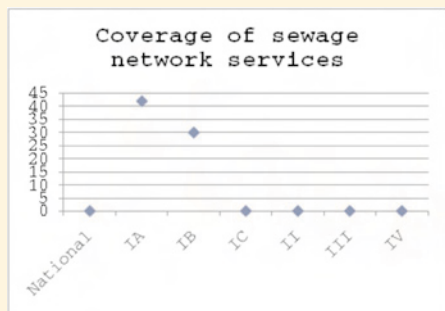

Sewerage	Coverage of toilets	Coverage of sewerage network services	Collection efficiency of the sewerage network	Adequacy of treatment capacity	Reuse of sewage recycling treatment	Quality of sewage	Efficiency in redressal of customer of charges	Cost recovery	Efficiency in collection
National	71.0	0.0	0.0	0.0	0.0	0.0	40.0	0.0	0.0
IA	97.5	42.0	47.5	77.5	19.2	50.5	53.0	84.5	
IB	85.0	30.0	54.5	56.0	3.0	11.0	80.0	35.0	73.0
IC	75.0	0.0	0.0	0.0	0.0	0.0	18.0	0.0	0.0
II	72.6	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
III	70.0	0.0	0.0	0.0	0.0	0.0	45.0	0.0	0.0
IV	68.0	0.0	0.0	0.0	0.0	0.0	50.0	0.0	0.0

Note: The blue coloured boxes indicate the highest figure for that particular indicator

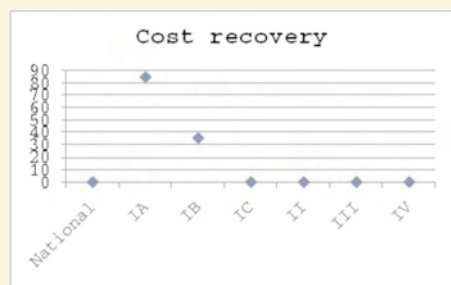

It can be seen that, IA cities have performed well in all the indicators of sewerage, suggesting that most of the cities have sewerage network and STPs for reuse and recycle of waste water. The towns in Class IC, II, III and IV towns does not have sewerage system, hence there is no scope for reuse and recycle of waste water.

The highest value for coverage of toilets was reported in class I towns as 97 percent. The lowest was observed in class IV towns which reported the median value of 68 percent.

Majority of the ULBs in all categories does not have the sewerage system. The system is observed mostly in Class IA and IB towns. The highest value is reported in class IA town as 42 percent.

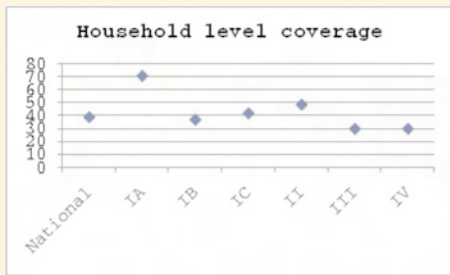

As many of the ULBs does not have the system of sewerage, the cost recovery from this sector is zero when it comes to classes of IC, II, III and IV towns, however the value reported for class IA and IB is 84 percent and 35 percent respectively.

### SOLID WASTE MANAGEMENT

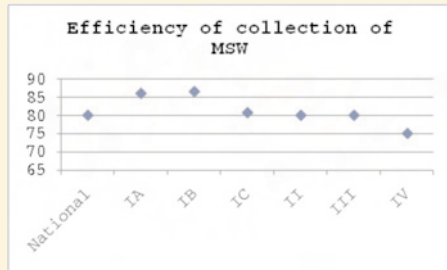

Solid Waste Management	Household level coverage	Efficiency of collection of MSW	Extent of segregation	Extent of MSW recovered	Extent of scientific disposal	Efficiency in redressal of complaints	Cost recovery	Efficiency in collection of charges
National	39.0	80.0	0.0	0.0	0.0	70.0	0.0	0.0
IA	71.0	86.0	1.0	7.0	0.0	41.0	7.0	40.5
IB	37.0	86.5	12.0	11.0	0.0	80.0	10.0	40.0
IC	41.9	80.7	0.0	0.0	0.0	72.0	0.0	0.0
II	48.6	80.0	0.0	0.0	0.0	70.0	0.0	0.0
III	30.0	80.0	0.0	0.0	0.0	70.0	0.0	0.0
IV	30.0	75.0	0.0	0.0	0.0	70.0	0.0	0.0

Note: The blue coloured boxes indicate the highest figure for that particular indicator

It can be seen that IA and IB cities are practicing segregation of solid waste and recovery of the same. Whereas, the cities falling in the other categories have no such provision. The ULBs under classes of IC, II, III and IV does not practice segregation, recovery and scientific disposal of solid waste.

The national level median value reported for the practice of door to door collection is 39 percent. The value is higher for class IA towns which is 71 percent.

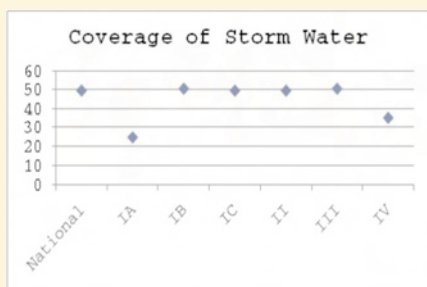

The efficiency for collection of municipal solid waste is slightly higher in class IB towns than IA towns. Class IV towns reported the lowest as 75 percent.

### STORM WATER DRAINAGE

Storm water management	Coverage	Incidence of water logging/flooding
National	50.0	2.0
IA	25.0	31.0
IB	51.0	19.5
IC	50.0	5.0
II	50.0	2.0
III	51.0	1.0
IV	35.5	1.0

Note: The blue coloured boxes indicate the highest figure for that particular indicator

It is interesting to note that class III cities have better coverage of storm water drains when compared to the other classes. Incidence of water logging points has been reported highest in IA class cities and lowest in III and IV class cities.

The coverage of storm water drains for the national level median is found as 50 percent. However the class IV towns have the least median value which is reported as 35 percent.
